Socially Intelligent Agents:

Socially Intelligent Agents Kerstin Dautenhahn, Alan H. Bond, Lola Canamero, Bruce Edmonds, 2006-04-11 Socially situated planning provides one mechanism for improving the social awareness of agents. Obviously, this work is in the preliminary stages and many of the limitations and the relationship to other work could not be addressed in such a short chapter. The chief limitation of course is the strong commitment to defining social reasoning solely at the meta level which restricts the subtlety of social behavior. Nonetheless, our experience in some real world military simulation applications suggest that the approach even in its preliminary state is adequate to model some social interactions and certainly extends the state of the art found in traditional training simulation systems.

Socially Intelligent Agents Kerstin Dautenhahn, Chisato Numaoka, 1998

Social Intelligence Nathan Emery, Nicola Clayton, Christopher D. Frith, 2008

Why are humans so clever? The Social intelligence hypothesis explores the idea that this cleverness has evolved through the increasing complexity of social groups. Our ability to understand and control nature is a by-product of our ability to understand the mental states of others and to use this knowledge to co-operate or deceive. These abilities have not emerged out of the blue. They can be found in many social animals that co-operate and compete with one another: birds as well as mammals. This book brings together contributions from an impressive list of authorities in the field, appropriately concluding with a chapter by Nick Humphrey, one of the pioneers in this field. This volume examines social intelligence in many different animal species and explores its development, evolution, and the brain systems upon which it depends. Better understanding and further development of social intelligence is critical for the future of the human race and the world that we inhabit. Our problems will not be solved by mere cleverness but by increased social co-operation.

Human Cognition and Social Agent Technology Kerstin Dautenhahn, 2000-03-15

Human Cognition and Social Agent Technology is written for readers who are curious about what human social cognition is and whether and how advanced software programs or robots can become social agents. Topics addressed in 16 peer-reviewed chapters by researchers at the forefront of agent research include Narrative intelligence and implementations of story telling systems, socially situated avatars and conscious software agents, cognitive architectures for socially intelligent agents, agents with emotions, design issues for interactive systems, artificial life agents.

contributions to agent design from artistic practice and a Cognitive Technology view on living with socially intelligent agents The book addresses both software and robotic agents On the one hand justice is done to the scientific and technical aspects and on the other hand the reader will learn about pioneering technological developments which are necessary for a public discourse and critical evaluation on where social agent technology is leading us and how such a development can be shaped in order to meet the social cultural and cognitive needs of humans The book is suitable for students researchers and everyone interested in this emerging and quickly growing field it does not require any specialist background knowledge
