Technological System:

The Technological System Jacques Ellul, 2018-06-11 Some 20 years after writing *The Technological Society* Jacques Ellul realized how the totalistic dimensions of our modern technological milieu required an additional treatment of the topic. Writing amidst the rise of books in the 1970s on pollution, over population and environmental degradation, Ellul found it necessary once again to write about the global presence of technology and its far reaching effects. *The Technological System* represents a new stage in Ellul's research. Previously he studied technological society as such; in this book he approaches the topic from a systems perspective wherein he identifies the characteristics of technological phenomena and technological progress in light of system theory. This leads to an entirely new approach to what constitutes the most important event of our society which has decisive bearing on the future of our world. Ellul's analysis touches on all aspects of modern life, not just those of a scientific or technological order. In the end, readers are compelled to formulate their own opinions and make their own decisions regarding the way a technique-based value system affects every level of human life. [The Ongoing](#)

[Technological System](#) Smail Ait-El-Hadjait, 2017-09-25 The high level of innovation currently transforming our society and its technological dynamics can be seen as a second wave of innovation of the third technological system which emerged in the late 1970s. This book discusses the concept of technological systems, focusing on the tools used for formalizing the organization of technology in society and its dynamics of evolution. The author uses these tools to characterize the contemporary technological system and to model its specific dynamics. In doing so, he raises questions about the continuity of the current technological system and its capacity to generate powerful innovative movements. **The Social Construction**

of Technological Systems Wiebe E. Bijker, Thomas Parke Hughes, Trevor J. Pinch, Trevor Pinch, 1989 The impact of technology on society is clear and unmistakable. The influence of society on technology is more subtle. The 13 essays in this book have been written by a diverse group of scholars united by a common interest in creating a new field: the sociology of technology. They draw on a wide array of case studies, from cooking stoves to missile systems, from 15th century Portugal to today's AI labs, to outline an original research program based on a synthesis of ideas from the social studies of science and the history of technology. Together they affirm the need for a study of technology that gives equal weight to technical, social, economic and political questions. Back cover **The Agro-Technological System towards 2000** G. Antonelli, A. Quadrio

Curzio, 2016-01-26 The research published here constitutes a profound reflection on what is taking place in the world of agriculture at the threshold of the year 2000. The book attempts to go beyond a narrow sectoral analysis of the primary sector. It sets out to focus instead on the dynamic and innovative aspects of the agrotechnological system constituted by the complex interdependence of the agro production, agro food, agro industrial and agro ecological subsystems. The authors, internationally renowned scholars and scientists, tackle the most pressing contemporary economic issues from both a theoretical and policy making standpoint. Three different lines of research are pursued concerning first the evolution and trends of world and

European agricultural production second agricultural surplus formation and productivity dynamics in the economies of industrialized countries and lastly the destination of agricultural outputs and land allotment under the impact of agro bio technologies

The Social Construction of Technological Systems, anniversary edition Wiebe E. varied technologies as thirteenth century galleys eighteenth century cooking stoves and twentieth century missile systems Taken together they affirm the fruitfulness of an approach to the study of technology that gives equal weight to technical social economic and political questions and they demonstrate the illuminating effects of the integration of empirics and theory The approaches in this volume collectively called SCOT after the volume s title have since broadened their scope and twenty five years after the publication of this book it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way
