Technology and Investment in the Prewar Japanese Chemical Industry Barbara Ann Molony, 1982 *Technology and Investment in the Prewar Japanese Chemical Industry* Barbara Molony, 1982 **The Technological Transformation of Japan** Tessa Morris-Suzuki, 1994-11-25 This landmark book is the first general English language history of technology in modern Japan *Nitrogen Capture* Anthony S. Travis, 2018-04-24 This monograph provides an account of how the synthetic nitrogen industry became the forerunner of the 20th century chemical industry in Europe the United States and Asia Based on an earlier SpringerBrief by the same author which focused on the period of World War I it expands considerably on the international aspects of the development of the synthetic nitrogen industry in the decade and a half following the war including the new technologies that rivalled the Haber Bosch ammonia process Travis describes the tremendous global impact of fixed nitrogen as calcium cyanamide and ammonia including the perceived strategic need for nitrogen mainly for munitions and increasingly its role in increasing crop yields including in Italy under Mussolini and in the Soviet Union under Stalin The author also reviews the situation in Imperial Japan including the earliest adoption of the Italian Casale ammonia process from 1923 and the role of fixed nitrogen in the industrialization of colonial Korea from the late 1920s Chemists historians of science and technology and those interested in world fertilizer production and the development of chemical industry during the first four decades of the twentieth century will find this book of considerable value Carbon Technocracy Victor Seow, 2023-05-10 A forceful reckoning with the relationship between energy and power through the history of what was once East Asia's largest coal mine The coal mining town of Fushun in China's Northeast is home to a monstrous open pit First excavated in the early twentieth century this pit grew like a widening maw over the ensuing decades as various Chinese and Japanese states endeavored to unearth Fushun's purportedly inexhaustible carbon resources Today the depleted mine that remains is a wondrous and terrifying monument to fantasies of a fossil fueled future and the

technologies mobilized in attempts to turn those developmentalist dreams into reality In Carbon Technocracy Victor Seow uses the remarkable story of the Fushun colliery to chart how the fossil fuel economy emerged in tandem with the rise of the modern technocratic state Taking coal as an essential feedstock of national wealth and power Chinese and Japanese bureaucrats engineers and industrialists deployed new technologies like open pit mining and hydraulic stowage in pursuit of intensive energy extraction But as much as these mine operators idealized the might of fossil fuel driven machines their extractive efforts nevertheless relied heavily on the human labor that those devices were expected to displace Under the carbon energy regime countless workers here and elsewhere would be subjected to invasive techniques of labor control ever escalating output targets and the dangers of an increasingly exploited earth Although Fushun is no longer the coal capital it once was the pattern of aggressive fossil fueled development that led to its ascent endures As we confront a planetary crisis precipitated by our extravagant consumption of carbon it holds urgent lessons This is a groundbreaking exploration of how the mutual production of energy and power came to define industrial modernity and the wider world that carbon made
