Nigel Gilbert, 2001 Drawing on the latest

research this book investigates the processes underlying the evolution of science and technology policies in the European Union and its member states The contributors explore the development of European Union policy since the 1980s its influence on the policies of individual countries the experiences of European Union collaborative research projects and the economic assumptions behind innovation policy **Research, Quality, Competitiveness** Attilio Stajano, 2006-06-26

Scholars have long been fascinated by the flexibility and attention to design and quality that are hallmarks of Italy's small firms Yet as the nature of the global economy shifts and the role of technological innovation becomes ever more important for the advanced industrial economies the ability of Italian industry to compete will depend far more than in the past on its ability to make use of the resources and networks provided by the European Union An enlarged Union now provides more opportunities for Italian firms but also increased competition for access to those EU programs that can help firms and governments provide the foundations for future economic growth and international competitiveness The European Union has become and will remain a critical actor for all those in any member state concerned with the competitiveness of firms and the creation of wealth within the framework of sustainable development in an increasingly competitive global economy The European Union is of special importance however for Italy As this volume explains so well Italy's challenge is a particularly difficult one Policymakers academics and businesspeople all will need to participate in EU programs in new ways in order to maximize the opportunities that the EU provides Italy's future is inextricably tied to that of the European Union and its leaders in all sectors of life must grasp the opportunities provided by the EU in order to meet their own home grown challenges The European Union and the Technology Shift Antonina Bakardjieva Engelbrekt, Karin Leijon, Anna Michalski, Lars Oxelheim, 2021-02-08 This book explores the multiple challenges that the global technology shift is posing to the EU It raises the question of how European societies will mobilize the positive effects of the rapid technological advancement in digitalization robotization and artificial intelligence while mitigating the negative consequences in terms of job losses cybercrime and social and political polarization From the vantage point of experts from economics law and political science this book provides insights into the role that the EU is and ought to be playing in regulating global platform companies addressing taxation in the digital economy mitigating job displacements on the labour market and tackling ethical concerns of artificial intelligence and the prospect of digital democracy All chapters are based on up to date research findings succinct assessment of the current state of affairs and ongoing debates They conclude with policy recommendations for policy makers on European and national levels This volume has a solid foundation in the highly topical question of technological change More importantly the individual chapters are written by qualified scholars whose analytically advanced contributions are likely to interest a wide audience I can strongly recommend this book for scholars and students in political science law and economics Carl Fredrik Bergström Professor of European Law Uppsala University Sweden When the Commission took office in 2019 it put forward its vision as to how Europe's digital future could be shaped in a way that

makes the digital transition enrich people's lives and make sure that European businesses fully benefit from the opportunities offered by digital technologies. Then COVID drastically accelerated the take up of digital solutions. As the digital transformation affects every single one of us, it is important that we have the widest possible debate on its inherent risks and opportunities. This is why I warmly recommend this book. It brings together an interdisciplinary set of scholars able to analyse the multifaceted implications of the technological shift. And I could not agree more with the book's main takeaway, i.e. that we need to create an adaptive regulatory framework capable of harnessing the positive effects of technological changes while buttressing the negative impact on European society and citizens. Ambassador Kim Jørgensen, Head of Cabinet to Commissioner and Executive Vice President Margrethe Vestager, European Commission.

Research, Quality, Competitiveness Attilio Stajano, 2008-11-01. The European Union (EU) was launched as a response to the economic dominance of the United States and to a lesser degree the Soviet Union. The nations of Western Europe were too small to compete against large-scale and diversified economies on their own. Six countries eventually expanded to 27, and counting took a series of steps toward progressively deeper integration: the removal of internal tariffs, the construction of a common external tariff, the elimination of many but not all non-tariff barriers leading to a single market, and the adoption of a common currency by 15 of the member states. The EU today equals and even exceeds the U.S. on many key indicators of performance. In the process, two similar but nonetheless divergent models of social and economic life stand in contrast with each other. The U.S. is more committed to capitalism and does little to dilute its harsh edges, while the nations of Europe support wider social safety nets and more active regulation of commercial activity to mute the crueler aspects of the free market. Until recently, the economic dynamism of the U.S. called into question whether the so-called European social model was sustainable in an era of globalization. The EU was slipping in competitiveness and was being challenged by new global powerhouses like China and India. Although the U.S. economy has slowed, there is little indication that European countries are capable of leveraging the situation to their advantage.
