Technology Power:

Education/Technology/Power Hank Bromley, Michael W. Apple, 1998-01-01 With a focus on educational computing this book examines how technological practices align with or subvert existing forms of dominance Examines the important question Is the enormous financial investment school districts are making in computing technology a good idea **China as an emerging regional and technology power** U.S.-China Economic and Security Review Commission, 2004 *The Militarily Critical Technologies List*, 1998 Reactor Technology, 1972 *A Distant Technology* J. P. Telotte, 1999 Science fiction films celebrate and critique the impact of a burgeoning technology on the world's cultural political and social milieu The Machine Age roughly delineated by the two decades between World Wars was a watershed period during which modern society entered into an ambiguous embrace with technology that continues today J P Telotte carefully blends film technology cultural and genre studies to illuminate this nearly forgotten era in our cinematic history and to show through analysis of classics like *The Invisible Ray* *Metropolis* and *Things to Come* how technology played a major role as motif actor and producer What he also discovers as he ranges among the American British Russian French and German science fiction cinema as well as mainstream films figures and cultural products such as the New York World's Fair is a fundamental ambivalence embedded in the films themselves about the very machine age ethos they promoted Even as advances in the technical apparatus of filmmaking elevated it from mere entertainment to a medium of general communication and genuine artistic expression Machine Age science fiction films remained curiously distant from and often skeptical of the very machines on which their narratives focus The resulting tensions Telotte writes thus seem to intersect with those implicit in a Western world that was struggling with its own transition into the modern rendering the films task inevitably paradoxical and difficult **NRL Review**, 1980 *Technology and Place* Steven A. Moore, 2011-01-20 Developing sustainable architectural and agricultural technologies was the intent behind Blueprint Farm an experimental agricultural project designed to benefit farm workers displaced by the industrialization of agriculture in the Rio Grande Valley of Texas Yet despite its promise the very institutions that created Blueprint Farm terminated the project after just four years 1987-1991 In this book Steven Moore demonstrates how the various stakeholders competing definitions of sustainability technology and place ultimately doomed Blueprint Farm He reconstructs the conflicting interests and goals of the founders including Jim Hightower and the Texas Department of Agriculture Laredo Junior College and the Center for Maximum Potential Building Systems and shows how ironically they unwittingly suppressed the self-determination of the very farm workers the project sought to benefit From the instructive failure of Blueprint Farm Moore extracts eight principles for a regenerative architecture which he calls his nonmodern manifesto **Marine and Hydrokinetic Energy Technology** United States. Congress. House. Committee on Science and Technology (2007). Subcommittee on Energy and Environment, 2010 **Nonconventional Energy** Ashok V. Desai, Mohan Munasinghe, 1990 With special reference to developing countries The Profession of Modeling and
