Telecommunications Advertising Digest

The National Advertising Division (NAD) of the National Programs provides independent self-regulation and dispute resolution services, guiding the trustfulness of advertising across the U.S. NAD reviews national advertising in all media and its decisions set consistent standards for advertising truth and accuracy, delivering meaningful protection to consumers and leveling the playing field for business.

NAD claims can be initiated through NAD's independent reviewing of advertising claims or through "challenges" to advertising claims filed by competitors, consumers, or public interest groups. This digest includes excerpts from key telecommunications cases. Each case involves consideration of the claims made in the advertising and testing and the supporting evidence provided by the advertiser.

Compliance with NAD decisions is voluntary. Nevertheless, NAD enjoys a high rate of compliance. Advertisers that either refuse to participate in the self-regulatory process or do not implement the NAD recommendations are referred to appropriate government agencies such as the Federal Trade Commission (FTC).

AT&T Services, Inc.

AT&T Fiber Case #6850 (June 2021)

NAD recommended that AT&T discontinue the implied claim that "Comcast speeds are slow and the implied claim that Comcast is unable to deliver that, up to 100 Mbps" in the challenged ad.

NAD recommended that AT&T discontinue the implied claim that "Comcast speeds are slow" to avoid conveying the unsupported message that cable speeds are slow. NAD also recommended that AT&T discontinue the implied claim that "Comcast speeds are slow" to avoid conveying the unsupported message that cable speeds are slow. NAD also recommended that AT&T discontinue the implied claim that "Comcast speeds are slow" to avoid conveying the unsupported message that cable speeds are slow. NAD also recommended that AT&T discontinue the implied claim that "Comcast speeds are slow" to avoid conveying the unsupported message that cable speeds are slow.

The advertiser appealed NAD's decision to the National Advertising Review Board (NARB). The appeal is pending.

Charter Communications, Inc.

Spectrum Internet Speed Case #5948 (May 2021)

NAD recommended that Charter discontinue the implied claim in the "Welcome Back, Party" commercial that (i) AT&T Internet is too slow for certain activities, including streaming, and (ii) AT&T does not offer speeds that exceed 200 Mbps. The North Measuring Broadband America Fixed Broadband Report, Federal Communications Commission (2020). NAD was not persuaded that AT&T's lack of participation in the collection of data for the Twentieth Broadband Report, should compel any inference relating to its internet speeds. In reaching this conclusion that a speed superiority claim could not be supported, NAD did not further conclude that the data collected on internet speeds experienced by customers of any particular ISP including Spectrum, was

Raman Amplifiers for Telecommunications 1 Mohammad N. Islam,2007-06-30

I remember vividly the first time that I heard about the erbium amplifier. At that time of course it was the erbium doped fiber amplifier the predecessor of the Raman amplifier that is the subject of this book. It was an early morning in a forgotten year in Murray Hill New Jersey at one of our Bell Labs monthly research staff meetings. About twenty directors and executive directors of research organizations clustered around a long table in the imposing executive conference room. Arno Penzias the vice president of research presided at the foot of the table. Everyone who participated in those research staff meetings will long remember their culture and atmosphere. Arno would pick an arbitrary starting point somewhere around the table and the designated person would head to the front of the table to give a short talk on something new in his or her research area. This first speaker would invariably fiddle helplessly with the controls embedded in the podium that controlled the viewgraph projector but eventually we would hear machinery grinding in the back room as a large hidden mirror moved into place. We would all wait quietly arranging and choosing our own viewgraphs from the piles that lay on the table in front of every participant.

Raman Amplifiers for Telecommunications 2 Mohammad N. Islam,2003-11-11 This edited monograph is written by leading experts in this area and is the first book entirely devoted to Raman amplification. Three sections include extensive background on Raman physics, descriptions of sub systems and modules utilizing Raman technology and a review of current state of the art systems.

Telecommunications Reform in the Asia-Pacific Region

Allan Brown, Moazzem Hossain, Duc-Tho Nguyen,2005-02-24 This book attempts to draw lessons from the experiences of developed as well as developing countries in carrying out telecommunications reform. Contributors come from academia as well as from stakeholders in telecommunications policy in a dozen countries mostly in the Asia Pacific region. Globally the telecommunications industry is undergoing major changes. Technological advances in the form of a vast number of new digitised services, ownership shifts as state owned carriers in many countries become fully or partly privatized and a general transition from monopolistic to more competitive market environments. The economic and regulatory experiences derived from these changes are explored and analyzed using the USA, the UK, Australia and Singapore to represent developed and newly industrialized countries and China, India, Indonesia, Malaysia, the Philippines, Sri Lanka, Thailand and Vietnam as examples of developing countries. The conclusions outlined in this timely volume hold important lessons for these as well as for other countries.
