Simon P. Rinas

Telecommunications Liberalized Services:

Approaches to Liberalizing Services Sherry Stephenson, 1999 Discusses various approaches to the liberalization of trade in services adopted by developing countries at the regional and sub regional levels and the treatment of services within two broader integration movements in the Asia Pacific region and the Western hemisphere *Competition Problems in Liberalized Telecommunications* Milena Stoyanova, 2008-01-01 This innovative study of the role of competition law in the telecommunications industry starts from a classic perspective While in principle regulation benefits social welfare and efficient allocation of resources past regulatory experience shows that regulation can be flawed and lead to welfare harm rather than good In the telecommunications industry specifically inappropriately designed sector specific remedies and regulatory delays in the introduction of new telecommunications services can hold up the development of the market towards effective competition and could incur considerable welfare losses In addition conventional antitrust analysis still lags behind the dynamic nature of the electronic communications markets Milena Stoyanova sets out to establish a new understanding of the role of sector specific regulation and competition law enforcement in the electronic communications sector addressing such questions as the following and Why a new regulatory framework and Are sectoral regulation and competition law enforcement mutually exclusive or complementary and Why should electronic communications markets be regulated to conform to competition law principles and What does competition law add to sector specific regulation and What is the relationship or proportion between regulation and competition law enforcement An overview of the telecommunications liberalization process initiated at European Community level reveals such problems as a divergent approach of national regulatory authorities in the application of one and the same norms inability of competition authorities to rightly assess the technicalities underlying a competition problem and difficulty in carrying out a periodical oversight of compliance with the competition law remedies The author discusses the legal basis and rationale for the application of the essential facility doctrine to the electronic communications sector and argues for new regulatory responses to the emergence of collective dominant firms in an oligopolistic setting and to the potential of multifirm conduct to restrict competition through price squeezing and other tactics The book concludes with a specific case study on the harmonisation of recent Bulgarian legislation with the European Community sector specific and competition law regimes and proposes the electronic communications sector Effective competition in the electronic communications market is crucial for securing the dynamic role of the entire information and communications technologies sector of which electronic communications form the largest segment The sound and well informed recommendations in this book ably address common and persistent problems making *Competition Problems in Liberalized Telecommunications* a forward looking mainstay for practitioners and other professionals involved in all aspects of the field *From Telecommunications Liberalization to Net Neutrality Rules* Simon P. Rinas, 2021-04-26 EU communications policy has massively changed due to both global competition on the ICT market and

technological developments that led to the emergence of Internet technology This book analyzes the structural and procedural transformation processes inside the EU legislative processes and concludes that EU communications policy struggles to reflect today's internet enabled communications reality It provides insights in the institutional conditions that maintained specific patterns of EU communications policy since the beginning of telecommunications regulation and concludes with an outlook on the technological and regulatory challenges ahead Telecommunications Equipment, 1998

Bundling Telecommunications Services Jan Krämer, 2009 With the advent of digital convergence incumbent telephone and cable companies have begun to offer their services such as voice telephony Internet and TV in so called triple play packages While carefully recognizing the technological legal and economic framework of the fixed line telecommunications industry this book investigates whether bundling is indeed a profitable pricing strategy for the firms and if it can possibly facilitate the leverage of market power into neighboring markets *National Regulation and Trade Liberalization in Services* Markus Krajewski, 2003-01-01 Like tariffs and other border measures national regulatory barriers impede international trade Unlike tariffs however such barriers usually indicate an important domestic policy choice This conflict of interest has emerged as a crucial issue in international law particularly with regard to services such as telecommunications and health services This study is the first to analyze the potential impact of incompatibilities between national regulatory regimes and the rules and obligations imposed by the General Agreement on Trade in Services GATS In the process of arriving at his challenging concluding theses the author investigates such relevant concepts as the following the political and ideological dynamics of GATS negotiations services trade liberalization in regional integration systems particularly in EC law policies common to diverse national regulatory systems the notions of deregulation and privatization the human rights implications of international trade law the GATS obligations of market access national treatment and most favoured nation treatment the role of the WTO's dispute settlement organs GATS transparency obligations Professor Krajewski's study is of enormous significance to specialists in regulatory policies and instruments at all national and sectoral levels especially in the context of ongoing GATS negotiations As the author warns Unless GATS negotiators and national regulators have a thorough understanding of the relationship between GATS obligations and regulatory policies and instruments they cannot effectively use the flexible elements of GATS and could reach an agreement which they may later regret Telecommunications Equipment: U.S. Performance in Selected Major Markets, Staff Research Study #24, **Telecommunications**

Liberalization on Two Sides of the Atlantic Martin Cave, Robert W. Crandall, 2004-06-23 A Brookings Institution Press and American Enterprise Institute publication The 1990s witnessed a major revolution in telecommunications policy in North America and Europe The electronics revolution swept the world and most countries began to realize that they could not compete in many markets without a vibrant competitive telecommunications sector As a result the European Union Canada and the United States launched major new liberalization policies aimed at opening all telecommunications markets to

competition This report presents two views of the progress towards competition one for North America and one for Europe The authors provide an overview of the market structure on both continents prior to the 1990s discuss significant regulatory changes during that decade and analyze changes in rate structures and competition that have occurred since liberalization They conclude with a look at the present and future impact of the Internet and other new technologies on the telecommunications industry

Liberalization and Regulation of the Telecommunications Sector in Transition Countries
Ekaterina Markova, 2008-11-14 Telecommunications are increasingly recognized as a key component in the infrastructure of economic development For many years there were state owned monopolies in the telecommunications sector In transition economies they were characterized by especially poor performance and high access deficits as telecommunications were considered to be a non profit oriented production process intended to support the socio economic superstructures As a result the starting point for the reform processes in transition countries was quite poor performed public monopolies functioned under completely different circumstances as the peers in the market economies The main question of this book is what the strategies for the successful future development of the telecommunications sector in transition countries are The special focus is on Russia the largest of the transition countries

Economic Liberalization and Turkey Sübidey Togan, 2010-04-05 The liberalization of the Turkish economy is a key factor affecting Turkey s application to join the European Union This book examines the impact of economic liberalization in Turkey and Turkey s approach to the elimination of barriers to trade It focuses on the liberalization of trade in Turkey s agricultural and industrial commodities sector and key services such as telecommunications electricity natural gas banking and transport The chapters include thorough discussions on WTO and EU approaches for the elimination of barriers to trade international and EU rules and regulations in the various service sectors and the methods for estimating the tariff equivalents of barriers to trade in the different service sectors as well as methods for estimating the benefits of liberalization of services for Turkey The experience of Turkey its approach to liberalization and its measures to eliminate barriers to trade serve as a useful model for other neighboring countries of the European Union
