Telepresence And Bio Art Networking Humans Rabbits And Robots Studies In Literature And Science:

Telepresence & Bio Art Eduardo Kac, 2005 Eduardo Kac's work represents a turning point. What it questions is our current attitudes to creativity taking that word in its most fundamental sense. Edward Lucie-Smith, author of *Visual Arts in the 20th Century*. His works introduce a vital new meaning into what had been known as the creative process while at the same time investing the notion of the artist-inventor with an original social and ethical responsibility. Frank Popper, author of *Origins and Development of Kinetic Art*. Kac's radical approach to the creation and presentation of the body as a wet host for artificial memory and site-specific work raises a variety of important questions that range from the status of memory in digital culture to the ethical dilemmas we are facing in the age of bioengineering and tracking technology. Christiane Paul, Whitney Museum of Art. For nearly two decades, Eduardo Kac has been at the cutting edge of media art, first inventing early online artworks for the web and continuously developing new art forms that involve telecommunications and robotics as a new platform for art. Interest in telepresence, also known as telerobotics, exploded in the 1990s and remains an important development in media art. Since that time, Kac has increasingly moved into the fields of biology and biotechnology. *Telepresence and Bio Art* is the first book to document the evolution of bio art and the aesthetic development of Kac, the creator of the artist's gene as well as the controversial glow-in-the-dark genetically engineered rabbit Alba. Kac covers a broad range of topics within media art, including telecommunications, media interactive systems and the Internet, telematics and robotics, and the contact between electronic art and biotechnology. Addressing emerging and complex topics, this book will be essential reading for anyone interested in contemporary art.

Media Technologies and Posthuman Intimacy Jan Stasienko, 2021-12-16 Constructing a theory of intimacy describing processes occurring between a human subject and information creations, Jan Stasienko shows in what way and in what phases that relationship is built and what its nature is. He discusses technologies and genres related to the construction of a new television message: teleprompter, interactive television, forms appearing both in the analogue and digital eras, composition of the film image and specificity of cinematic technologies, peep show, hybrid animation, digital visual effects. Also, new media technologies and genres will be discussed, for example, aspects relating to computer games and Web portals making video materials available. This diversity is prompted by the desire to show that the building of intimacy protocols is not the domain of the digital era and, on the other hand, that the posthumanism of media apparatus is a wide-ranging problem, i.e. the area encompasses various vehicles findable throughout various historical periods.

Japanese Robot Culture Yuji Sone, 2016-12-17 Japanese Robot Culture examines social robots in Japan those in public domestic and artistic contexts Unlike other studies this book sees the robot in relation to Japanese popular culture and argues that the Japanese affinity for robots is the outcome of a complex loop of representation and social expectation in the context of Japan s continuing struggle with modernity Considering Japanese robot culture from the critical perspectives afforded by theatre and performance studies this book is concerned with representations of robots and their inclusion in social and cultural contexts which science and engineering studies do not address The robot as a performing object generates meaning in staged events and situations that make sense for its Japanese observers and participants This book examines how specific modes of encounter with robots in carefully constructed mises en sc ne can trigger reflexive culturally
