Situation To Sentence:

Cognitive English Grammar Günter Radden, René Dirven, 2007 Cognitive English Grammar is designed to be used as a textbook in courses of English and general linguistics. It introduces the reader to cognitive linguistic theory and shows that Cognitive Grammar helps us to gain a better understanding of the grammar of English. The notions of motivation and meaningfulness are central to the approach adopted in the book. In four major parts comprising 12 chapters, Cognitive English Grammar integrates recent cognitive approaches into one coherent model allowing the analysis of the most central constructions of English. Part I presents the cognitive framework: conceptual and linguistic categories, their combination in situations, the cognitive operations applied to them, and the organisation of conceptual structures into linguistic constructions. Part II deals with the category of things and their linguistic structuring as nouns and noun phrases. It shows how things are grounded in reality by means of reference, quantified by set and scalar quantifiers, and qualified by modifiers. Part III describes situations as temporal units of various layers internally, as types of situations, and externally as located relative to the time of speech and grounded in reality or potentiality. Part IV looks at situations as relational units and their structuring as sentences. Its two chapters are devoted to event schemas and space and metaphorical extensions of space. Cognitive English Grammar offers a wealth of linguistic data and explanations. The didactic quality is guaranteed by the frequent use of definitions and examples, a glossary of the terms used, overviews and chapter summaries, suggestions for further reading, and study questions. Philosophy of Syntax Mieszko Talasiewicz, 2009-11-12
Abstract: In the chapter, some preliminary methodological issues are discussed, including the demarcation between logic and linguistics and the shortcomings of the empirical base of the theory of syntax. An epistemological approach to language is sketched out, and a need for the proper balance between logical aspects of natural language and vernacular usage is claimed. Crucial for any reliable theory of syntax and semantics, learnability and efficiency are presented as the most important constraints to be imposed upon a logical analysis of language. Keywords: Linguistics, Logic, Methodology, Natural Language. 1. Epistemological Background of the Problem of Syntax. Among central questions of epistemology, two are the most fundamental: how language is related to the reality that we talk about in this language, and how one can rationally learn what this reality is like. Let us label these questions respectively the question of reference and the question of method. Certainly, these two are very closely interconnected. Perhaps some solution to the problem of reference would solve the problem of method; the way in which language refers to reality would tell us how to verify the sentences of this language. But in general, it can be otherwise. Equally imaginable is the case that we know what, e.g., which possible states of affairs our sentences refer to, but we do not know, still, we cannot rationally justify our belief in this respect, whether they are true, still.

Parts and Wholes in Semantics Friederike Moltmann, 1997-08-14. This book develops a unified account of expressions involving the notions of

part and whole in which principles of the individuation of part structures play a central role Moltmann presents a range of new empirical generalizations with data from English and a variety of other languages involving plurals mass nouns adnominal and adverbial modifiers such as as a whole together and alone nominal and adverbial quantifiers ranging over parts and expressions of completion such as completely and partly She develops a new theory of part structures which differs from traditional mereological theories in that the notion of an integrated whole plays a central role and in that the part structure of an entity is allowed to vary across different situations perspectives and dimensions
