Six Degrees The Science Of A Connected Age:

Six Degrees: The Science of a Connected Age Duncan J. Watts, 2004-02-17 The pioneering young scientist whose work on the structure of small worlds has triggered an avalanche of interest in networks In this remarkable book Duncan Watts one of the principal architects of network theory sets out to explain the innovative research that he and other scientists are spearheading to create a blueprint of our connected planet Whether they bind computers economies or terrorist organizations networks are everywhere in the real world yet only recently have scientists attempted to explain their mysterious workings From epidemics of disease to outbreaks of market madness from people searching for information to firms surviving crisis and change from the structure of personal relationships to the technological and social choices of entire societies Watts weaves together a network of discoveries across an array of disciplines to tell the story of an explosive new field of knowledge the people who are building it and his own peculiar path in forging this new science **Sync** Steven

Davis, 2020-01-30 Networks are

everywhere networks of friends transportation networks and the Web Neurons in our brains and proteins within our bodies form networks that determine our intelligence and survival This modern accessible textbook introduces the basics of network science for a wide range of job sectors from management to marketing from biology to engineering and from neuroscience to the social sciences Students will develop important practical skills and learn to write code for using networks in their areas of interest even as they are just learning to program with Python Extensive sets of tutorials and homework problems provide plenty of hands on practice and longer programming tutorials online further enhance students programming skills This intuitive and direct approach makes the book ideal for a first course aimed at a wide audience without a strong background in mathematics or computing but with a desire to learn the fundamentals and applications of network science **The Connected City** Zachary P. Neal, 2012-08-06 The Connected City explores how thinking about networks helps make sense of modern cities what they are how they work and where they are headed Cities and urban life can be examined as networks and these urban networks can be examined at many different levels The book focuses on three levels of urban networks

micro meso and macro These levels build upon one another and require distinctive analytical approaches that make it possible to consider different types of questions At one extreme micro urban networks focus on the networks that exist within cities like the social relationships among neighbors that generate a sense of community and belonging At the opposite extreme macro urban networks focus on networks between cities like the web of nonstop airline flights that make face to face business meetings possible This book contains three major sections organized by the level of analysis and scale of network Throughout these sections when a new methodological concept is introduced a separate method note provides a brief and accessible introduction to the practical issues of using networks in research What makes this book unique is that it synthesizes the insights and tools of the multiple scales of urban networks and integrates the theory and method of network analysis

Complexity Science: An Introduction Mark A Peletier, Rutger A Van Santen, Erik Steur, 2019-03-20 This book on complexity science comprises a collection of chapters on methods and principles from a wide variety of disciplinary fields from physics and chemistry to biology and the social sciences In this two part volume the first part is a collection of chapters introducing different aspects in a coherent fashion and providing a common basis and the founding principles of the different complexity science approaches the next provides deeper discussions of the different methods of use in complexity science with interesting illustrative applications The fundamental topics deal with self organization pattern formation forecasting uncertainties

synchronization and revolutionary change self adapting and self correcting systems and complex networks Examples are taken from biology chemistry engineering epidemiology robotics economics sociology and neurology *Informing Science Volume One: Concepts and Systems* T. Grandon Gill, 2016 The two volume Informing Science series is the first attempt to survey and synthesize research in the informing science transdiscipline Part textbook part collection of readings the two volumes present both important research findings relating to the field and highlight fertile directions for future research Volume One Concepts and Systems focuses on the key building blocks of informing science It begins with an overview of the transdiscipline tracing its evolution from Cohen s original proposal to its present state Next it considers a series of concepts that frequently elude attempts at rigorous definition Among these theory research information knowledge and complexity With working definitions established it goes on to explore basic systems theory introducing the concept of an informing system The key elements of such systems the channel the sender informer and the receiver client are then examined individually The volume concludes with two overview chapters The first of these looks at the analysis of a basic informing system in which a single informer interacts directly with a clearly specified client or set of clients The last chapter extends these ideas to the more complex topologies e g multiple channels multiple informers multiple clients layers of informing that are more typical in real world informing contexts *Decision Making: A Psychophysics Application Of Network Science* Paolo Grigolini, Bruce J West, 2011-07-19 This invaluable book captures the proceedings of a workshop that brought together a group of distinguished scientists from a variety of disciplines to discuss how networking influences decision making The individual lectures interconnect psychological testing the modeling of neuron networks and brain dynamics to the transport of information within and between complex networks Of particular importance was the introduction of a new principle that governs how complex networks talk to one another the Principle of Complexity Management PCM PCM establishes that the transfer of information from a stimulating complex network to a responding complex network is determined by how the complexity indices of the two networks are related The response runs the gamut from being independent of the perturbation to being completely dominated by it depending on the complexity mismatch **Network Science** National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Network Science for Future Army Applications, 2006-01-15 The military is currently attempting to develop itself into a force capable of networkcentric operations While this effort has highlighted the military s dependence on interacting networks it has also shown that there is a huge gap between what we need to know about networks and our fundamental knowledge about network behavior This gap makes the military vision of NCO problematic To help address this problem the Army asked the NRC to find out whether identifying and funding a new field of network science could help close this gap This report presents an examination of networks and the military an analysis of the promise content and challenges of network science and an assessment of approaches to creating value from network science *Sociology and Complexity Science* Brian

Castellani, Frederic William Hafferty, 2009-10-03 By now most academics have heard something about the new science of complexity In a manner reminiscent of Einstein and the last hundred years of physics complexity science has captured the public imagination One can go to Amazon com and purchase books on complexification Casti 1994 emergence Holland 1998 small worlds Barab si 2003 the web of life Capra 1996 fuzzy thinking Kosko 1993 global complexity Urry 2003 and the business of long tails Anderson 2006 Even television has incorporated the topics of complexity science Crime shows such as 24 or CSI typically feature investigators using the latest advances in computational modeling to simulate scenarios or data mine all possible suspects all of which is done before the crime takes place The World Wide Web is another example A simple search on Google Com using the phrase complexity science gets close to a million hits Complexity science is ubiquitous What most scholars do not realize however is the remarkable role sociologists are playing in this new science Consider the following examples

0 1 Sociologists in Complexity Science The first example comes from the new science of networks Barab si 2003 By now most readers are familiar with the phenomena known as six degrees of separation the idea that because most large networks are comprised of a significant number of non random weak ties the nodes e g people companies etc Handbook of Quantitative Science and Technology Research Henk F. Moed, Wolfgang Glänzel, Ulrich Schmoch, 2006-02-23 This handbook offers a state of the art overview of quantitative science and technology research It focuses on the development and application of indicators derived from data on scientific or scholarly publications and patents It comprises 34 chapters written by leading specialists in the various sub domains These chapters deal with theoretical and methodological issues illustrate applications and highlight their policy context and relevance Authors present a survey of the research topics they address and show their most recent achievements The 34 chapters are arranged into 5 parts Disciplinary Approaches General Methodology The Science System The Technology System and The Science Technology Interface The Editor's Introduction provides a further specification of the handbook's scope and of the main topics addressed in its chapters This handbook aims at four distinct groups of readers practitioners in the field of science and technology studies research students in this field scientists scholars and technicians who are interested in a systematic thorough analysis of their activities policy makers and administrators who wish to be informed about the potentialities and limitations of the various approaches and about their results
