Social Science Technical Systems And Cooperative Work The Great Divide:

Social Science, Technical Systems, and Cooperative Work Geoffrey Bowker, Susan Leigh Star, Les Gasser, William Turner, 2014-05-12 This book is the first to directly address the question of how to bridge what has been termed the great divide between the approaches of systems developers and those of social scientists to computer supported cooperative work a question that has been vigorously debated in the systems development literature Traditionally developers have been trained in formal methods and oriented to engineering and formal theoretical problems many social scientists in the CSCW field come from humanistic traditions in which results are reported in a narrative mode In spite of their differences in style the two groups have been cooperating more and more in the last decade as the people problems associated with computing become increasingly evident to everyone The authors have been encouraged to examine rigorously and in depth the theoretical basis of CSCW With contributions from field leaders in the United Kingdom France Scandinavia Mexico and the United States this volume offers an exciting overview of the cutting edge of research and theory It constitutes a solid foundation for the rapidly coalescing field of social informatics Divided into three parts this volume covers social theory design theory and the sociotechnical system with respect to CSCW The first set of chapters looks at ways of rethinking basic social categories with the development of distributed collaborative computing technology concepts of the group technology information user and text The next section concentrates more on the lessons that can be learned at the design stage given that one wants to build a CSCW system incorporating these insights what kind of work does one need to do and how is understanding of design affected The final part looks at the integration of social and technical in the operation of working sociotechnical systems Collectively the contributors make the argument that the social and technical are irremediably linked in practice and so the great divide not only should be a thing of the past it should never have existed in the first place

Hildreth, 2004-01-01 *Going Virtual* Distributed Communities of Practice contributes to the understanding of how more subtle kinds of knowledge can be managed in a distributed international environment It describes work in the field of knowledge management with a specific focus on the management of knowledge which cannot be managed by the normal capture codify store approach and provides answers to the questions of what is the nature of the more subtle kind of knowledge and how can it be managed in the distributed environment **Expert Systems Research Trends** A. R. Tyler, 2007 An expert system also known as a knowledge based system is a computer program that contains some of the subject specific knowledge of one or more human experts This class of program was first developed by researchers in artificial intelligence during the 1960s and 1970s and applied commercially throughout the 1980s The most

common form of expert systems is a program made up of a set of rules that analyse information usually supplied by the user of the system about a specific class of problems as well as providing mathematical analysis of the problems and depending upon their design recommend a course of user action in order to implement corrections. It is a system that utilises what appear to be reasoning capabilities to reach conclusions. This book presents important research on in this dynamic field.

Virtual Society is one vision of the consequential impact of these technologies. But to what extent and in what ways are the Internet and other electronic technologies really changing our lives? To what extent are we moving to a virtual society? This collection provides a comprehensive set of detailed empirical studies of the genesis and use of these new technologies ranging widely across application areas from cyber cafés to new media email and organizational memory to surveillance capable technologies in the workplace virtual reality to CCTV in high rise housing stock exchange addicts to student study networks. It offers a unique perspective analytic scepticism for making sense of some surprisingly

counterintuitive results and for developing a refreshingly critical view of many taken for granted assumptions about the impact of the Internet on social relations and institutions Each chapter presents a high quality exemplar of its own disciplinary perspective addressed to a general social science audience The diversity of disciplinary perspectives is brought to bear in a central message laid out in the opening discussion of the Five Rules of Virtuality that with due reflexive caution and ironic sensitivity general messages can be drawn from the observations of particular substantive contexts In particular claims that we are moving to a virtual society need to be tempered by a reassessment of connections between what counts as real and virtual This book will appeal to students and researchers in a very wide range of disciplines both within and beyond the social sciences and management and to all practitioners struggling with the realities of the new virtual technologies

Frankfurt School can help designers do what they want to do can teach wisdom itself can provoke and can introduce new ways of seeing They illustrate their argument by presenting classic texts by thinkers in critical theory from Althusser to i ek alongside essays in which leaders in interaction design and HCI describe the influence of the text on their work For example one contributor considers the relevance Umberto Eco s Openness Information Communication to digital content another reads Walter Benjamin s The Author as Producer in terms of interface designers and another reflects on the implications of Judith Butler s Gender Trouble for interaction design The editors offer a substantive introduction that traces the various strands of critical theory Taken together the essays show how critical theory and interaction design can inform each other and how interaction design drawing on critical theory might contribute to our deepest needs for connection competency self esteem and wellbeing Contributors Jeffrey Bardzell Shaowen Bardzell Olav W Bertelsen Alan F Blackwell Mark Blythe Kirsten Boehner John Bowers Gilbert Cockton Carl DiSalvo Paul Dourish Melanie Feinberg Beki Grinter Hr nn Brynjarsd ttir Holmer Jofish Kaye Ann Light John McCarthy S ren Bro Pold Phoebe Sengers Erik Stolterman Kaiton Williams Peter Wright Classic texts Louis Althusser Aristotle Roland Barthes Seyla Benhabib Walter Benjamin Judith Butler Arthur Danto Terry Eagleton Umberto Eco Michel Foucault Wolfgang Iser Alan Kaprow S ren Kierkegaard Bruno Latour Herbert Marcuse Edward Said James C Scott Slavoj i ek **Digital Geographies—Urbanisation, Economy, and Modelling** Abdul Shaban,2024-12-17

Lupton, Minna Ruckenstein, 2022-05-09 This Open Access book brings the experiences of automation as part of quotidian life into focus. It asks how, where, and when automated technologies and systems are emerging in everyday life across different global regions. What are their likely impacts in the present and future? How do engineers, policy makers, industry stakeholders, and designers envisage artificial intelligence (AI) and automated decision making (ADM) as solutions to individual and societal problems? How do these future visions compare with the everyday realities, power relations, and social inequalities in which AI and ADM are experienced? What do people know about automation, and what are their experiences of engaging with actually existing AI and ADM technologies? An international team of leading scholars bring together research developed across anthropology, sociology, media and communication studies, and ethnology, which shows how, by rehumanising automation, we can gain deeper understandings of its societal impacts. TechnoScienceSociety Sabine Maasen, Sascha Dickel, Christoph Schneider, 2020-07-01 This book introduces the term of TechnoScienceSociety to focus on the ongoing technological reconfigurations of science and society. It aspires to use the breadth of Science and Technology Studies to perform a critical diagnosis of our contemporary culture. Instead of constructing technology as society's other, the book sets out to highlight the both complex and ambivalent entanglements of technologies, sciences, and socialities. It provides some tentative steps towards a diagnosis of a society in which individuals and organizations address themselves, their pasts, presents, futures, hopes, and problems in technoscientific modes. Technosciences redesign matter, life, self, and society. However, they do not operate independently. Technoscientific practices are deeply socially and culturally constituted. The diverse contributions highlight the ongoing technological reconfigurations of rationalities, infrastructures, modes of governance, and publics. The book aims to inspire scholars and students to think and analyze contemporary conditions in new ways, drawing on and expanding the toolkits of Science and Technology Studies.
