## **Society And Nature:**

*Society and Nature* Peter Dickens, 1992 In this wide ranging effort to theorize about the relationships between society and nature Peter Dickens attempts to reconstruct social theory in a way that enables it to speak to contemporary environmental issues After reviewing existing sociological traditions he draws on the early work of Karl Marx to suggest that processes and relations in the workplace are the main source of people's separation from nature In addition people's understanding of nature tends to mirror their experience of the social world Redefining the work of Anthony Giddens in an ecological direction Dickens analyzes developments in biological thinking that seem consistent with this approach He considers the role of culture and he critiques the contemporary deep green and deep ecology movements Focusing on the alienation of human beings from the natural world and the place of nature in their deep mental structures the author works in part from a Marxist perspective but draws a wide variety of social psychological and biological theories into the discussion *Society and Nature* not only addresses a central debate in contemporary social science regarding this interrelationship but also responds to the intellectual challenge presented by natural scientific concepts of environmental problems that oversimplify or ignore their political or social relational dimensions Author note Peter Dickens is Senior Lecturer in Urban Studies and Social Policy at the University of Sussex UK and the author of *Urban Sociology* *Society Locality and Human Nature* *Nature and Society in Historical Context* Mikulas Teich, Roy Porter, Bo Gustafsson, 1997-02-13 A collection of essays describing the historical connection between nature and society *Society and Nature* Peter Dickens, 2004-02-23 *Society and Nature* is a lively and highly accessible introduction to the sociology of the environment The book provides a comprehensive guide to contemporary issues and current debates including society nature and the enlightenment industry and environmental transformation commodification consumption the network society and human identity human biology citizenship and new social movements Combining insights from contemporary sociology politics developmental biology and psychology Peter Dickens suggests that environmental degradation is largely due to humanity's narcissistic demand that the environment be made into a commodity to be consumed Meanwhile human biology is also being modified people's bodies are being rebuilt in ways that reflect their class positions People and their surroundings have always adapted according to the demands of society But modern capitalist society is changing the environment and its people in profound potentially catastrophic ways shaping both human and non human nature in its own image The book contains a number of student features to interest and guide the reader as well as an attractive and clear layout It will be particularly useful for students and teachers of sociology human ecology environmental studies and social theory Dickens insight won him the American Sociological Association's Outstanding Publication Award 2006 in the Environment and Technology section **Society and Nature** Hans Kelsen, 2014-05-22 First published in 1998 This is Volume XIV of eighteen in the *Sociology of Behaviour and Psychology* series This text is concerned with sociological inquiry into society and nature Written in 1946 it investigates the

idea that society and nature if conceived of as two different systems of elements are the results of two different methods of thinking and are only as such two different objects The same elements connected with each other according to the principle of causality constitute nature connected with each other according to another namely a normative principle they constitute society

**Justice, Society and Nature** Brendan Gleeson, Nicholas Low, 2002-09-11 Justice Society and Nature examines the moral response which the world must make to the ecological crisis if there is to be real change in the global society and economy to favour ecological integrity From its base in the idea of the self through principles of political justice to the justice of global institutions the authors trace the layered structure of the philosophy of justice as it applies to environmental and ecological issues Philosophical ideas are treated in a straightforward and easily understandable way with reference to practical examples Moving straight to the heart of pressing international and national concerns the authors explore the issues of environment and development fair treatment of humans and non humans and the justice of the social and economic systems which affect the health and safety of the peoples of the world Current grass roots concerns such as the environmental justice movement in the USA and the ethics of the international regulation of development are examined in depth The authors take debates beyond mere complaint about the injustice of the world economy and suggest what should now be done to do justice to nature

*Society and Exploitation Through Nature* Martin Phillips, Tim Mighall, 2014-06-06 Society and Exploitation Through Nature offers an integrated approach to the environment linking the philosophical social and physical sciences to environmental problems and issues The text covers three main themes exploitation of nature and society the limits of exploitation through sustainability and managing environmental problems These themes are illustrated throughout the book with global case studies

*Society and Nature* Hans Kelsen, 1946 **The Social Construction of Nature** Klaus Eder, 1996-10-14 This is a unique and agenda setting interpretation of nature and ecology that will become the essential reference in any debate on environmental politics and sociology

*Nature, Society, and Justice in the Anthropocene* Alfred Hornborg, Alf Hornborg, 2019-06-27 Money and market prices obscure an unequal global exchange of resources which is a prerequisite to what we perceive as technological progress

*Nature, Environment and Society* Philip Sutton, 2017-03-14 How have sociologists responded to the emergence of environmentalism What has sociology to offer the study of environmental problems This uniquely comprehensive guide traces the origins and development of environmental movements and environmental issues providing a critical review of the most significant debates in the new field of environmental sociology It covers environmental ideas environmental movements social constructionism critical realism ecocentric theory environmental identities risk society theory sustainable development Green consumerism ecological modernization and debates around modernity and post modernity Philip Sutton adopts a long term view which focuses on the relationship between ideas of nature and environment ecological identities and social change providing a framework for future research Bringing environmental issues into contact with sociological theories Nature Environment and Society

provides an up to date introduction to this important new field It will be essential reading for all students of sociology environmental studies and anyone interested in understanding environmental problems

**Education, Nature, and Society** Stephen Gough, 2014-11-20 Environmental issues continue to divide opinion sometimes in extreme ways Almost everyone agrees that education has a role to play in ensuring the future of humanity on Earth Some think we should all learn to leave a minimal environmental footprint others argue that education should promote economic growth because only growth can generate the capital needed to develop solutions to environmental problems Advocates on each side often find the views of their opponents simply incredible giving rise to accusations of bad faith or poor science This book explores the foundations of the debate by examining human interrelations with Nature It takes an educational perspective but also draws on evidence from anthropology economics ecology policy sciences and natural history The case presented is that any coherent view of the purposes and potential of education requires a theory of human society in the natural world For such a theory education and more broadly learning must be more than an instrument for the achievement of personal or policy goals Rather it is an integral continuing and necessary component of personal and policy development On this basis a novel approach to curriculum design and implementation is outlined

**Creation and Ecology** Ronald A. Simkins, 2020-12-24 In this book Ronald A Simkins addresses the current environmental crisis and what the Bible might contribute in response to it The environmental crisis includes loss of biodiversity degradation of the soil and especially climate change If left unchecked these trends will bring about the collapse of human civilization These environmental problems are interrelated and share a similar cause the exploitation of the natural world through an economy structured by capitalist relations of production and powered by the burning of fossil fuels Through our economic relations we have depleted natural resources polluted natural environments and altered natural processes These problems are a product of our political economy which entails not only our politics ideology and religion but primarily our economic system Because the crisis is economic at its core Simkins first sets the Bible within its own economic context exploring how the biblical ideas of creation an understanding of the human relationship to the natural world were the product of the ancient Israelite political economy Then Simkins places the biblical tradition in conversation with the current environmental crisis The result is a far richer view of creation in the biblical tradition and a better understanding of what is at stake in the current environmental crisis

KELSEN, 2018 *Proceedings of the Boston Society of Natural History. VOL. XX 1878-1880* Boston Society of Natural History, 1881 Parks and People in Postcolonial Societies M. Ramutsindela, 2004-09-24 Against the background of colonial and postcolonial experiences this volume shows that power relations and stereotypes embedded in the original Western idea of a national park are a continuing reality of contemporary national and transnational parks The volume seeks to dispel the myth that colonial beliefs and practices in

protected areas have ended with the introduction of new nature conservation policies and practices It explores this continuity against the backdrop of the development of the national park idea in the West and its trajectories in colonial and postcolonial societies particularly southern Africa This volume analyses the dynamic relations between people and national parks and assesses these in southern Africa against broader experiences in postcolonial societies It draws examples from a broad range of situations and places It reinserts issues of prejudices into contemporary national park systems and accounts for continuities and interruptions in national parks ideals in different contexts Its interpretation of material transcends the North South divide This volume is accessible to readers from different academic backgrounds It is of special interest to academics policymakers and Non Governmental Organisations This book can also be used as prescribed or reference material in courses taught at university

**Bulletin of the Natural History Society of New Brunswick** Natural History Society of New Brunswick,1907      **Journal of the East Africa and Uganda Natural History Society** East Africa and Uganda Natural History Society,1910      *Environment and Society* Erika Cudworth,2005-08-04 At the start of the twenty first century it can be argued that human societies have a greater impact on the environment than ever before We have always been dependent upon and interacted with the natural environment However the dramatic social changes of the past three centuries have altered the form of our relationship with non human nature to the extent that some would see people planet relations as in a situation of crisis *Environment and Society* provides a comprehensive and critical account of the ways in which we can think about the relationship between human societies and the environments with which they interact It argues that human societies are ecologically embedded and that environments are often socially embedded and constituted It makes the different theoretical positions and empirical studies accessible to students and includes chapter outlines and summaries annotated further reading boxed case studies and discussion points
