Technological Development And Science In The Industrial Age New Perspectives On The Science Technology Relationship:

Technological Development and Science in the Industrial Age P. Kroes, M. Bakker, 2013-03-09 Historians and philosophers of technology are searching for new approaches to the study of the interaction between science and technology. New conceptual frameworks are necessary since the idea that technology is simply applied science is nothing short of a myth. The papers contained in this volume deal primarily with cognitive and social aspects of the science technology issue. One of the most salient features of these papers is that they show a major methodological shift in studying the interaction between science and technology. Discussions of the science technology issue have long been dominated by the demarcation problem and related semantic issues about the notions science and technology and the technology is applied science thesis. Instead of general global interpretation schemes and models of the interaction between science and technology, detailed empirical case studies of cognitive and institutional connections between science and technology constitute the hard core of this book. The book will be of interest to philosophers of science, historians and philosophers of technology and science and sociologists of science.

The Relationship of Science and Technology Rodney P. Carlisle, 1997 **The Context of Explanation** M. Bunzl, 2012-12-06 In this book Martin Bunzl considers the prospects for a general and comprehensive account of explanation given the variety of interests that prompt explanations in science. Bunzl argues that any successful account of explanation must deal with two very different contexts: one static and one dynamic. Traditionally, theories of explanation have been built for the former of these two contexts. That is to say, they are designed to show how it is that a finished body of scientific knowledge can be put to explanatory use. But finished sciences are few and far between. Real explanation also occurs in a dynamical context in which questions are asked and answers are given as theories are in the process of being constructed. Here Bunzl argues that attending to explanation produced under these dynamic circumstances undermines prominent features of the theory of explanation produced in the traditional static context.

Metaarchaeology Lester Embree, 2012-12-06 An idea of the philosophy of archaeology can best be gained by showing what it is, what the issues are, who is working in the field, and how they proceed. Reading Lester Embree's *Metaarchaeology* provides the best possible introduction to the field since in it several leading archaeologists show how accessible and interesting the current archaeological literature is, and currently active philosophers of archaeology reveal something of the current state of discussion on the subject. Bibliographies have also been developed of the philosophy of archaeology as well as of selected parts of the component that can be called metaarchaeology. Finally, an historical introduction has been included to show the variety of metascientific as well as orientational standpoints that philosophers of archaeology have had recourse to for over two decades, followed by speculation about the future of the discipline within the philosophy of science.

The Historical Development of Energetics Georg Helm, 2013-12-01 Although produced in controversy this book is not a controversial work The calming effects of the years that have passed since the tumultuous days in Lubeck are enough to guarantee that these pages will accurately trace the coming and going of opinions the battle for the truth and the recognition of error In only a few passages especially in Part Six will one be able to tell from the tone of the book that it comes out of this struggle For these I ask the indulgence of my reader since they contain explanations the extent of which probably does not correspond either to the difficulty of the questions treated or to their influence But in such passages the extent of treatment could not as was otherwise the case be made to depend solely on a judgment as to the value and significance of the investigations presented There considerations of defense more than concern for symmetry had to determine the structure

Hermeneutics and Science Márta Fehér, O. Kiss, L. Ropolyi, 2013-04-17 Hermeneutics was elaborated as a specific art of understanding in humanities The discovered paradigmatic historical characteristics of scientific knowledge and the role of rhetoric interpretation and contextuality enabled us to use similar arguments in natural sciences too In this way a new research field the hermeneutics of science emerged based upon the works of Husserl Merleau Ponty Heidegger and Gadamer A dialogue between philosophers and scientists begins in this volume on hermeneutic approaches to physics biology ethology mathematics and cognitive science Scientific principles methodologies discourse language and metaphors are analyzed as well as the role of the lay public and the legitimation of science Different
