Tectonics Magmatism And Metallogeny Of Mongolia:

Tectonics, Magmatism, and Metallogeny of Mongolia A. B. Dergunov, 2001 This volume provides a systematic description of the most important geological structures of Mongolia and discusses the main features of these structures and their interactions The reconstitution of palaeotectonic zonation of the Caledonian and Hercynian basins is presented and the difference in their geotectonic nature is demonstrated The main characteristics of magmatism are described for each stage of tectonic development and the evolution of magmatism is considered with reference to lithosphere development The volume also includes results of an isotopic geochemical study which provides information on the evolution of the Central Asia mantle Mongolia is a key region of the world and this volume provides a primary source of reference for postgraduates and researchers

Tectonics, Magmatism and Metallogeny of Mongolia A.B Dergunov, 2004-11-23 This volume provides the first systematic description of the most important geological structures of Mongolia and discusses the main features of these structures and their interactions The main characteristics of magmatism are described for each stage of tectonic development and the evolution of magmatism is considered with reference to lithosphere development Mongolia is a key region of the world and this volume provides a primary source of reference for postgraduates and researchers

Tectonics of Asia (Northern, Central and Eastern Asia) Oleg V. Petrov, Shuwen Dong, 2021-03-03 The book provides the results of tectonic geological and geophysical studies of Northern Central and Eastern Asia obtained over the last 20 years and a Tectonic map for this area overview as well as essays on its geodynamic evolution These new results were obtained by an international team of specialists within the project Atlas of geological maps of Central Asia and adjacent areas scale 1:2 500 000 initiated in 2003 by geological surveys of Russia China Mongolia Kazakhstan and South Korea under the auspices of the CGMW The most of the book contains the descriptions of the tectonic structure of major geological regions of Asia such as the Ural Sayan Baikal and Tien Shan orogenic systems The tectonic structure of the Pamirs Turan Plate Mongolia Southern China Korea and other regions is also discussed The book contains maps of gravity and magnetic anomalies sketch maps of deep structures of the area and the geotranssect crossing the most important geological structures of Asia The final chapter of the book describes the tectonic evolution of the Central Asian Orogenic Belt from the Neoproterozoic to the Mesozoic

Geological Evolution

of Central Asian Basins and the Western Tien Shan Range Marie-Françoise Brunet, Tom McCann, Edward R. Sobel, 2017-10-10 The geological evolution of Central Asia commenced with the formation of a complex Precambrian Palaeozoic orogen Cimmerian blocks were then accreted to the southern margin in the Mesozoic leading to tectonic reactivation of older structures and discrete episodes of basin formation The Indian and Arabian blocks collided with Asia in the Cenozoic leading to renewed structural reactivation intracontinental deformation and basin development This complex evolution resulted in the present day setting of an elongated Tien Shan range flanked by large Mesozoic Cenozoic sedimentary basins with smaller intramontane basins distributed within the range This volume presents multidisciplinary results and reviews from research groups in Europe and Central Asia that focus on the western part of the Tien Shan and some of the adjacent large sedimentary basins These works elucidate the Late Palaeozoic Cenozoic tectono sedimentary evolution of the area Emphasis is given to the collision of terranes and continents and the ensuing fault reactivations The impact of climatic changes on sedimentation is also examined

Alkaline Rocks and Carbonatites of the World, Part 4

A.R. Woolley, 2019-09-02 The alkaline igneous rocks and carbonatites are compositionally and mineralogically the most diverse of all igneous rocks and apart from their scientific interest are of major and growing economic importance They are important repositories of certain metals and commodities indeed the only significant sources of some of them and include Nb the rare earths Cu V diamond phosphate vermiculite bauxite raw materials for the manufacture of ceramics and potentially Th and U The economic potential of these rocks is now widely appreciated particularly since the commencement of the mining of the Palabora carbonatite for copper and a host of valuable by products Similarly the crucial economic dominance of rare earth production from carbonatite related occurrences in China has stimulated the world wide hunt for similar deposits This volume describes and provides ready access to the literature for all known occurrences of alkaline igneous rocks and carbonatites of Antarctica Asia and Europe excluding the former USSR Australasia and oceanic islands More than 1 200 occurrences from 59 countries are outlined together with those of 57 oceanic islands and island groups The descriptions include geographical coordinates and information on general geology rock types petrography mineralogy age and economic aspects with the principal references cited There are 429 geological and distribution maps and a locality index As has been demonstrated by the three earlier volumes the present book is likely to be of considerable interest to mineral exploration companies as there are no comprehensive published reviews of the economic aspects of the alkaline rocks It will also interest research scientists in the fields of igneous petrology and volcanology and geologists concerned with the regional distribution of igneous rocks and their geodynamic relationships
