Telecommunications Revolution Past Present And Future:

The Telecommunications Revolution Harvey M. Sapolsky, Rhonda J Crane, W Russell Neuman, Eli M Noam, 2018-04-09
Originally published in 1992 this book charts the global restructuring of telecommunications industries away from the monopoly structures of the past towards increased competition deregulation and privatization The book s authors are international policy makers and scholars who examine the regulatory environment within a theoretical and historical context The book looks at the roots of regulatory and legislative changes by discussing individually the countries at the forefront of the revolution the UK France Germany Japan and the United States It examines the impact of new technology for consequences of change in trade and government policies The Telecommunications Revolution in Korea James F. Larson, 1995 The first English language work on Korea s unique experiences with telecommunications this book focuses on Korea s distinct political economic legal socio cultural and personal dimensions It includes chapters on the relationship between political liberalization and telecommunications education and public promotion of the information society together with the role of new technologies in the reunification of Korea **Information Technologies and Global Politics** James N. Rosenau, J. P. Singh, 2012-02-01 Returning to the fundamentals of political science namely power and governance this book studies the relationship between information technologies and global politics Key issue areas are carefully examined security including information warfare and terrorism global consumption and production international telecommunications culture and identity formation human rights humanitarian assistance the environment and biotechnology Each demonstrates the validity of the view now prevalent within international relations research the shifting of power and the locus of authority away from the state Three major conclusions are offered First the nation state must now confront support or coexist with other international actors non governmental and intergovernmental organizations multinational corporations transnational social movements and individuals Second our understanding of instrumental and structural powers must be reconfigured to account for digital information technologies Finally and perhaps most importantly information technologies are now reconstituting actor identities and issues **The Gordian Knot** W. Russell Neuman, Richard Jay Solomon, Lee W. McKnight, 1999-07-26 Veterans of the high definition TV wars of the 1980s the authors social scientists as well as technologists came to see themselves as chroniclers and students of an intriguing and serious techno economic conflict Why they asked did so few understand the rules of the game In a broad account accessible to generalist and specialist alike they address the current national debate about the development of a national information infrastructure locating the debate in a broad historical narrative that illuminates how we got here and where we may be going and outlining a bold vision of an open communications infrastructure that will cut through the political gridlock that threatens this information highway Technical change the authors argue is creating a new paradigm that fits neither the free market nor regulatory control models currently in play They detail what is wrong with the political process of the national information infrastructure policy making

and assess how different media systems telecommunications radio television broadcasting were originally established spelling out the technological assumptions and organizational interests on which they were based and showing why the old policy models are now breaking down The new digital networks are not analogous to railways and highways or their electronic forebears in telephony and broadcasting they are inherently unfriendly to centralized control of any sort so the old traditions of common carriage and public trustee regulation and regulatory gamesmanship no longer apply The authors technological and historical analysis leads logically toward a policy proposal for a reformed regulatory structure that builds and protects meaningful competition but that abandons its role as arbiter of tariffs and definer of public service and public interest
