The Politics of Disability in Interwar and Socialist Czechoslovakia Victoria Shmidt,2025-10-01 By focusing on the politics of disability as a pillar of Czechoslovak identity The Politics of Disability in Interwar and Socialist Czechoslovakia Segregating in the Name of the Nation reflects upon the vicissitudes of nation building over the twentieth century that led to extreme forms of institutional violence against minorities mainly the Roma such as forced sterilization The authors trace the intersectionality of ethnicity and disability which proliferated across diverse realms of public life positioning the continuities and ruptures of interrogating propaganda and racial science during the interwar and post war periods as establishing and reinforcing the border between a healthy Czech majority and a disabled Roma minority The book critically revises this border that remains observable but unapproachable until it operates as a part of constructing the authenticity of a nation

Current Developments in Anthropological Genetics Michael H. Crawford,James H. Mielke,2012-12-06 This volume examines the interrelationship of ecology subsistence patterns and the observed genetic variation in human populations Hence the book is divided conceptually into the following categories nonhuman primates hunters and gatherers nomads swidden agriculturalists peasants farmers religious isolates and modern and urban aggregates While many of these populations have experienced and are experiencing acculturation as a result of contact with technologically more advanced groups the genetic structures described in this volume attempt to reconstruct the traditional patterns as well as genetic changes because of contact Most chapters also integrate biological genetic social and demographic data within an ecological frame thus presenting a holistic view of the population structures of ecologically distinct groups The first chapter examines the body of early nonhuman primate literature that emphasized ecological determinism in effecting the population structure of our primate ancestors relatives It also examines more recent literature since 1970 in which it became apparent that greater flexibility exists in primate social structure within specific environmental frameworks Thus it appears that our nonhuman primate evolutionary heritage is not one of ecological determinism in social organization but one of flexibility and rapid change suggesting the evolutionary success of our species is based upon a system of flexibility and that social adaptations can be accomplished in a number of diverse ways
