Algorithmic Problems in Groups and Semigroups Jean-Camille Birget, Stuart Margolis, John Meakin, Mark V. Sapir, 2012-12-06 This volume contains papers which are based primarily on talks given at an international conference on Algorithmic Problems in Groups and Semigroups held at the University of Nebraska Lincoln from May 11 May 16 1998 The conference coincided with the Centennial Celebration of the Department of Mathematics and Statistics at the University of Nebraska Lincoln on the occasion of the one hundredth anniversary of the granting of the first Ph D by the department Funding was provided by the US National Science Foundation the Department of Mathematics and Statistics and the College of Arts and Sciences at the University of Nebraska Lincoln through the College's focus program in Discrete Experimental and Applied Mathematics The purpose of the conference was to bring together researchers with interests in algorithmic problems in group theory semigroup theory and computer science A particularly useful feature of this conference was that it provided a framework for exchange of ideas between the research communities in semigroup theory and group theory and several of the papers collected here reflect this interaction of ideas The papers collected in this volume represent a cross section of some of the results and ideas that were discussed in the conference They reflect a synthesis of overlapping ideas and techniques stimulated by problems concerning finite monoids finitely presented monoids finitely presented groups and free groups

Lower Bounds in Communication Complexity Troy Lee, Adi Shraibman, 2009 The communication complexity of a function $f(x, y)$ measures the number of bits that two players one who knows x and the other who knows y must exchange to determine the value $f(x, y)$ Communication complexity is a fundamental measure of complexity of functions Lower bounds on this measure lead to lower bounds on many other measures of computational complexity This monograph surveys lower bounds in the field of communication complexity Our focus is on lower bounds that work by first representing the communication complexity measure in Euclidean space That is to say the first step in these lower bound techniques is to find a geometric complexity measure such as rank or trace norm that serves as a lower bound to the underlying communication

complexity measure Lower bounds on this geometric complexity measure are then found using algebraic and geometric tools
