The Competitive Advantage of Nations: The Case of Turkey Özlem Öz, 2019-05-23

First published in 1999, this volume applies Professor Michael Porter's diamond framework (1990) to the Turkish glass, construction, leather, clothes, automobile, and flat steel industries. Zlam Z aims primarily to contribute towards an improvement of this framework and thus towards a better understanding of the sources of competitive advantage. Her research presents a new approach to evaluate the competitiveness of the Turkish economy, given that alternative studies usually focus on factors like exchange rates and the cost of labour and raw materials as the determinants of competitive advantage. The author begins her book by providing an evaluation of the diamond framework linked to the debate created by the publication of *The Competitive Advantage of Nations*. She then identifies the pattern of advantage in Turkey by specifying the internationally competitive industries and clusters. This is followed by a detailed examination of the five Turkish industry case studies: glass, construction, leather, clothes, automobile, and flat steel industries. The findings are generally supportive of Porter. The results suggest, however, several major areas in the framework, especially domestic rivalry and the role of government, where one or more of the Turkish cases question Porter's hypotheses. The book ends with the implications of the study for the sources of competitive advantage in general and for the Turkish economy in particular. Porter and his diamond framework are both unquestionably influential. Improvements upon it forwarded in this book will be of use to academic readers as well as strategic planners and policy makers.

Competitive Advantage Michael E. Porter, 2008-06-30

Now beyond its eleventh printing and translated into twelve languages, Michael Porter's *The Competitive Advantage of Nations* has changed completely our conception of how prosperity is created and sustained in the modern global economy. Porter's groundbreaking study of international competitiveness has shaped national policy in countries around the world. It has also transformed thinking and action in states, cities, companies, and even entire regions such as Central America. Based on research in ten leading trading nations, *The Competitive Advantage of Nations* offers the first theory of competitiveness based on the causes of the productivity with which companies compete. Porter shows how traditional comparative advantages such as natural resources and pools of labor have been superseded as sources of prosperity, and how broad macroeconomic accounts of competitiveness are insufficient. The book introduces Porter's diamond, a whole new way to understand the competitive

position of a nation or other locations in global competition that is now an integral part of international business thinking Porter's concept of clusters or groups of interconnected firms suppliers related industries and institutions that arise in particular locations has become a new way for companies and governments to think about economies assess the competitive advantage of locations and set public policy Even before publication of the book Porter's theory had guided national reassessments in New Zealand and elsewhere His ideas and personal involvement have shaped strategy in countries as diverse as the Netherlands Portugal Taiwan Costa Rica and India and regions such as Massachusetts California and the Basque country Hundreds of cluster initiatives have flourished throughout the world In an era of intensifying global competition this pathbreaking book on the new wealth of nations has become the standard by which all future work must be measured
