The Complete Report Of Banking Safety Privacy:

Complete Guide to Security and Privacy Metrics Debra S. Herrmann, 2007-01-22 This book defines more than 900 metrics measuring compliance with current legislation, resiliency of security controls and return on investment. It explains what needs to be measured, why and how to measure it, and how to tie security and privacy metrics to business goals and objectives. The metrics are scaled by information sensitivity, asset criticality and risk, aligned to correspond with different lateral and hierarchical functions, designed with flexible measurement boundaries and can be implemented individually or in combination. The text includes numerous examples and sample reports and stresses a complete assessment by evaluating physical, personnel, IT and operational security controls.

Security and Privacy in Communication Networks Raheem Beyah, Bing Chang, Yingjiu Li, Sencun Zhu, 2018-12-28 This two volume set LNCS 254 255 constitutes the post conference proceedings of the 14th International Conference on Security and Privacy in Communication Networks SecureComm 2018 held in Singapore in August 2018. The 33 full and 18 short papers were carefully reviewed and selected from 108 submissions. The papers are organized in topical sections on IoT security, user and data privacy, mobile security, wireless security, software security, cloud security, social network and enterprise security, network security, applied cryptography and web security.

Banks as Security Actors Esmé Bosma, 2025-04-22 This book analyses how banks implement counter terrorist financing measures and experiment with technologies to assess risks and make security decisions. Banks have become private security actors. As gatekeepers of the financial system, they are legally obliged to conduct customer research and monitor bank accounts for unusual or suspicious transactions. Given the sheer volume of financial transactions that banks process daily, detection of financial crime heavily relies on digital security technologies that help analysts categorise and identify risky customers and financial transactions. Drawing from theories at the intersection of International Relations and Science and Technology Studies, the book advances the concept of description to offer a framework for analysing experimentation with security and digital technologies in practice. The research is based on fieldwork conducted in the financial crime sector in the Netherlands and the United Kingdom. It explores how political and ethical choices materialise at the human technology interface and analyses the production of customer risk profiles, the design and use of transaction monitoring systems and the emergence of public-private partnerships to counter terrorist financing. This book will be of interest to students and researchers in International Relations, Science and Technology Studies and Critical Security Studies.
