which later came to be recognized as *Opalina*, *Giardia*, *Trichomonas* and others. Following his pioneering work in the field of microscopic observation, knowledge of protozoa has accumulated at an accelerating pace. Some 30 000 living species have been identified and an equal number of fossil species from habitats which range from the ocean waters to the exuvial fluid of insects. The study of protozoan nutrition is a particularly interesting aspect of this expanding field of zoology. What kind of nourishment do protozoa need, how do they acquire it, and what influence do the answers to these two questions have on where protozoa live? The need to determine what kind of food protozoa are utilizing in their environment is desirable in all ecological studies involving microorganisms of aquatic communities.
