Meyer, 2012-12-06 The simple fact that the authors were able to give injectable heroin to volunteers for addictive self administration at a Harvard facility may elude the notice it deserves On the other hand research questions centering on whether heroin is linked to a craving for pleasure or relief of pain might raise the transplanted hackles of those who simplistically see scientists as pursuing only transparent trivialities In truth this report is about a historical and pioneering step in clinical research on a major unsolved problem of the biological social psychological roots of addiction The research questions posed are clearly relevant both to the design of effective treatments and treatment policy and to the basic science search that could help our understanding of how addictive drugs capture such powerful control over behavior Heroin was synthesized and has been available along with aspirin for over three quarters of a century Yet with all the tools of Western science and with the enormous and growing social personal and economic costs of world wide heroin use we surprisingly
