The Constant Couple George Farquhar,1777 *The Constant Couple, Etc* George Farquhar,1750 The Search for Non-Newtonian Gravity Ephraim Fischbach,Carrick L. Talmadge,2012-12-06 Newton's inverse square law of gravitation has been one of the cornerstones of physics ever since it was proposed 300 years ago One of its most well known features is the prediction that all objects fall in a gravitational field with the same acceleration This observation in the form of the Equivalence Principle is a fundamental assumption of Einstein's General Relativity Theory This book traces the history of attempts to test the predictions of Newtonian Gravity and describes in detail recent experimental efforts to verify both the inverse square law and the Equivalence Principle Interest in these questions have increased in recent years as it has become recognized that deviations from Newtonian gravity could be a signal for a new fundamental force in nature This is the first book devoted entirely to this subject and will be useful to both graduate students and researchers interested in this field This book describes in detail the ideas that underlie searches for deviations from the predictions of Newtonian gravity focusing on macroscopic tests since the question of gravitational effects in quantum systems would warrant a separate work A historical development is combined with detailed technical discussions of the theoretical ideas and experimental results A comprehensive bibliography with approximately 450 entries is provided **The Constant Couple ... The Fifth Edition; with a New Scene Added to the Part of Wildair; and a New Prologue** George Farquhar,1732 Constraint-Based Mining and Inductive Databases Jean-Francois Boulicaut,Luc De Raedt,Heikki Mannila,2006-02-08 The interconnected ideas of inductive databases and constraint based mining are appealing and have the potential to radically change the theory and practice of data mining and knowledge discovery This book reports on the results of the European IST project cInQ consortium on knowledge discovery by Inductive Queries and its final workshop entitled Constraint Based Mining and Inductive Databases organized in Hinterzarten Germany in March 2004 *Independent Television Production in the UK* David Lee,2018-03-07 This book is the first authoritative account of the UK's independent television production sector following the creation of Channel 4 in 1982 It examines the rise of a global industry increasingly interconnected through format development distribution ancillary sales and rights Drawing on case studies interviews and policy analysis the author considers the cultural politics behind the growth of the indies the labour conditions for workers in this sector and some of the key television programmes that have been created within it Filling an important gap in our understanding this book constitutes a comprehensive account of this vital cultural industry for students academics and researchers working in the areas of the cultural and creative industries media and cultural policy and television studies *The Theory of Search Games and Rendezvous* Steve Alpern,Shmuel Gal,2006-04-10 Search Theory is one of the original disciplines within the field of Operations Research It deals with the problem faced by a Searcher who wishes to minimize the time required to find a hidden object or target The Searcher chooses a path in the search space and finds the target when he is sufficiently close to

it Traditionally the target is assumed to have no motives of its own regarding when it is found it is simply stationary and hidden according to a known distribution e g oil or its motion is determined stochastically by known rules e g a fox in a forest The problems dealt with in this book assume on the contrary that the target is an independent player of equal status to the Searcher who cares about when he is found We consider two possible motives of the target and divide the book accordingly Book I considers the zero sum game that results when the target here called the Hider does not want to be found Such problems have been called Search Games with the ze sum qualifier understood Book II considers the opposite motive of the target namely that he wants to be found In this case the Searcher and the Hider can be thought of as a team of agents simply called Player I and Player II with identical aims and the coordination problem they jointly face is called the Rendezvous Search Problem

Computational Materials Discovery Artem R. Oganov, Gabriele Saleh, Alexander G. Kvashnin, 2018-10-30 New technologies are made possible by new materials, and until recently, new materials could only be discovered experimentally. Recent advances in solving the crystal structure prediction problem mean that the computational design of materials is now a reality. *Computational Materials Discovery* provides a comprehensive review of this field, covering different computational methodologies as well as specific applications of materials design. The book starts by illustrating how and why first-principle calculations have gained importance in the process of materials discovery. The book is then split into three sections: the first exploring different approaches and ideas, including crystal structure prediction, evolutionary approaches, data mining, methods, and applications of machine learning; Section two then looks at examples of designing specific functional materials with special technological relevance, for example, photovoltaic materials, superconducting materials, topological insulators, and thermoelectric materials. The final section considers recent developments in creating low-dimensional materials. With contributions from pioneers and leaders in the field, this unique and timely book provides a convenient entry point for graduate students, researchers, and industrial scientists on both the methodologies and applications of the computational design of materials.
