Understanding Consciousness

Max Velmans,2000 A classic of animation education since it

first published in 1981 For more than 25 years copies of *Timing for Animation* have been sitting dog eared and spine split on desks and workstations around the world wherever animation is produced All you need to breathe life into your animation is at your fingertips All the vital techniques employed by animators worldwide are explained using dozens of clear illustrations and simple straightforward directions Learn how animations should be arranged in relation to each other how much space should be used and how long each drawing should be shown for maximum dramatic effect Fully revised and updated the second edition includes timing for digital production digital storyboarding in 2D digital storyboarding in 3D the use of After Effects and much much more Timing shows weight mood and power and can make or break an animation get it right the first time with these tried and tested techniques Get straight to the good stuff with simple no nonsense instruction on the key techniques like stretch and squash animated cycles overlapping and anticipation

Understanding Consciousness Gerd Sommerhoff,2000-06-27 This is surely the ultimate expression of the top down approach to consciousness written with Sommerhoff s characteristic clarity and precision It says far more than other books four times the size of this admirably concise volume This book is destined to become a pillar of the subject

Rodney Cotterill Technical University of Denmark The problem of consciousness has been described as a mystery about which we are still in a terrible muddle and in *Understanding Consciousness Its Function and Brain Processes* the author unravels this mystery through a clarification of the main concepts related to consciousness followed by a comprehensive biological explanation Consequently this book will be ideal for a wide range of upper level undergraduate and postgraduate

courses The author interprets consciousness as a property that can also be possessed by creatures lacking a language faculty and comprises all of the following awareness of the surrounding world awareness of the self as an entity and awareness of such things as thoughts and feelings He argues that a biological approach can achieve both the necessary conceptual clarifications and a joint explanation of these divisions of awareness in terms of just two accurately defined concepts of internal representation and two empirically supported assumptions about the functional architecture of a specific set of brain processes Despite this striking simplicity his model covers these divisions of awareness both as objective faculties of the brain and as subjective experience These conclusions are applied to a broad range of fundamental questions including the biological rationale of subjective experience and where consciousness resides in the neural networks

Consciousness as a Scientific Concept Elizabeth Irvine, 2012-10-13 The source of endless speculation and public curiosity our scientific quest for the origins of human consciousness has expanded along with the technical capabilities of science itself and remains one of the key topics able to fire public as much as academic interest Yet many problematic issues identified in this important new book remain unresolved Focusing on a series of methodological difficulties swirling around consciousness research the contributors to this volume suggest that consciousness is in fact not a wholly viable scientific concept Supporting this eliminativist stance are assessments of the current theories and methods of consciousness science in their own terms as well as applications of good scientific practice criteria from the philosophy of science For example the work identifies the central problem of the misuse of qualitative difference and dissociation paradigms often deployed to identify measures of consciousness It also examines the difficulties that attend the wide range of experimental protocols used to operationalise consciousness and the implications this has on the findings of integrative approaches across behavioural and neurophysiological research The work also explores the significant mismatch between the common intuitions about the content of consciousness that motivate much of the current science and the actual properties of the neural processes underlying sensory and cognitive phenomena Even as it makes the negative eliminativist case the strong empirical grounding in this volume also allows positive characterisations to be made about the products of the current science of consciousness facilitating a re identification of target phenomena and valid research questions for the mind sciences
