**Essential Hypertension and Its Causes** Paul I. Korner, 2007-05-11 Essential hypertension EH is the most common type of high blood pressure and is responsible for much death and serious illness which has been the reason for the huge research effort to determine its causes However countless scientific articles still keep proclaiming that the causes of essential hypertension remain unknown In view of the number of publications that descend on the hypertension specialist like a waterfall such proclamations seem to overlook the considerable amount of knowledge that we already have about the etiology of EH The problem may be a lack of synthesis rather than a lack of information This book brings together some of this knowledge into a coherent and clinically relevant account about the pathogenesis of EH With an extremely broad reach this book aims to give a balanced view of the causes of

Fluid Dynamics in Biology Angela Y. Cheer,1993 This volume contains nearly all the papers presented at the AMS IMS SIAM Joint Summer Research Conference on Biofluidodynamics held in July 1991 at the University of Washington Seattle The lead paper by Sir James Lighthill presents a comprehensive review of external flows in biology The other papers on external and internal flows illuminate developments in the protean field of biofluidynamics from diverse viewpoints reflecting the field s multidisciplinary nature For this reason the work should be useful to mathematicians biologists engineers physiologists cardiologists and oceanographers alike The papers highlight a number of problems that have remained largely unexplored due to the difficulty of addressing biological flow motions which are often governed by large systems of nonlinear differential equations and involve complex geometries However recent advances in computational fluid dynamics have expanded opportunities to solve such problems These developments have increased interest in areas such as the mechanisms of blood and air flow in humans the dynamic ecology of the oceans animal swimming and flight to name a few     Novel Strategies Targeting Obesity and Metabolic Diseases, Volume II Xinran Ma,Lingyan Xu,Yan Lu,Dechun Feng,Nuo Sun,Jiqiu Wang,2024-02-08 This Research Topic is part of the Novel Strategies Targeting Obesity and Metabolic Diseases series Volume I The 21st century features excessive food availability and prevalent sedentary lifestyle Unsurprisingly obesity has become one of the most serious problems threatening public health with a staggering morbidity mortality rate Obesity is the leading risk factor for a series of metabolic diseases i e diabetes cardiovascular disease hypertension non alcoholic hepatic steatosis osteoporosis and certain types of cancer Although theoretically body weight could be easily controlled by the balance of food intake and caloric burning the rapid and stressful pace of modern society has made the healthy life style of eating less and exercising more hard to achieve its popularity Pharmacotherapeutic solutions targeting appetite or energy expenditure are limited and often with undesired and sometimes dangerous side effects The problem becomes even more complicated when genetic susceptibility for obesity is taken into account In result till now the long and intense battle for obesity intervention still wages and we are in urgent need for effective weight losing strategies     **Diagnostic Nuclear Medicine** Martin P. *Pathophysiology of Severe Ischemic Myocardial Injury* H.M. Piper, 2012-12-06 In industrialized countries ischemic heart disease is by far the most common organ specific cause of death The thrombotic occlusion of a coronary artery which had previously been severely altered by atherosclerosis is the most frequent cause of ischemic deterioration of myocardial tissue i e myocardial infarction Death of the human individual occurs when myocardial ischemia causes a critical impairment of cardiac pump function The failure of a heart with an ischemic area may be due to the amount and location of contractile tissue becoming paralyzed or even necrotic or to arrhythmias provoked by the ischemic condition or by a combination of both factors Considerable progress has been made in the development of antiarrhythmic therapy Effective tools have been developed to reperfuse ischemic myocardial tissue as soon as the patient reaches hospital However therapeutical principles for the ischemic reperfused myocardium which would specifically interfere with the state of injury of the ischemic tissue at the onset of reperfusion and avoid the apparent hazards of the reperfusion process itself have yet to be established But not only approved therapeutical concepts are lacking the pathophysiology of myocardial cell injury in progressive ischemia and under reperfusion is in itself only partly understood
