## Dissociation of an Acid

## Equation

$$\text{pH} = \text{pK}_a + \log_{10} \frac{[\text{A}^{\ominus}]}{[\text{HA}]}$$

pH : pH value of the solution

$K_a$  : Dissociation constant of the acid

$[\text{A}^{\ominus}]$ : Concentration of the conjugate base ( $\text{A}^{\ominus}$ )

$[\text{HA}]$ : Concentration of the acid (HA)

**The Henderson equation** Warren Adler,1975      Drying Technologies in Food Processing Xiao Dong Chen,Arun S. Mujumdar,2009-03-16 Drying is by far the most useful large scale operation method of keeping solid foods safe for long periods of time and is of fundamental importance in most sectors of food processing Drying operations need to be precisely controlled and optimized in order to produce a good quality product that has the highest level of nutrient retention and flavor whilst maintaining microbial safety This volume provides an up to date account of all the major drying technologies employed in the food industry and their underlying scientific principles and effects Various equipment designs are classified and described The impact of drying on food properties is covered and the micro structural changes caused by the process are examined highlighting their usefulness in process analysis and food design Key methods for assessing food properties of dried products are described and pre concentration and drying control strategies are reviewed Thermal hazards and fire explosion detection and prevention for dryers are discussed in a dedicated chapter Where appropriate sample calculations are included for engineers and technologists to follow The book is directed at food scientists and technologists in industry and research food engineers and drying equipment manufacturers      **Handbook of Food Preservation** M. Heinz, 2013-03-08 The material of this volume was originally planned to be incorporated in the preceding monograph *Mechanics and Energetics of Biological Transport* A separate and coherent treatment of the variety of bioelectrical phenomena was considered preferable mainly for didactic reasons Usually the biologist has to gather the principles of bioelectricity he needs from different sources and on different levels The present book intends to provide these principles in a more uniform context and in a form adjusted to the problems of a biologist rather than of a physicist or electrical engineer The main emphasis is put on the molecular aspect by relating the bioelectrical phenomena such as the membrane diffusion potentials pump potentials or redox potentials to the properties of the membrane concerned and as far as possible to specific steps of transport and metabolism of ions and nonelectrolytes Little space is devoted to the familiar and widely used representation of bioelectrical phenomena in terms of electrical networks of equivalent circuits with batteries resistances capacities etc In order to elucidate the basic principles the formal treatment is kept as simple as possible using highly simplified models based on biological systems The corresponding equations are derived in two ways kinetically i.e. in terms of the Law of Mass Action as well as energetically i.e. in terms of Nonequilibrium Thermodynamics      *Electrowinning Iron and Recycling Sulfuric Acid from Iron Sulfates: a Zero-Carbon Iron-Making Process* François Cardarelli, 2023-11-07 This comprehensive monograph is primarily intended to describe the patented FerWIN technology a green and zero carbon iron making process which consists to perform the electrowinning of iron metal and the recycling of sulfuric acid from iron sulfates that are by produced at the million tons scale worldwide while releasing pure oxygen gas The information has been presented in such a form that industrial electrochemists chemical engineers metallurgists and other practicing engineers scientists professors and technologists will have access to relevant scientific and technical information supported by key experimental data that were obtained from extensive laboratory prototype and pilot testing It also includes comprehensive electrochemical and engineering calculations costs and benefits analysis financial and sensitivity analysis This monograph will be of value also to men and women engaged in the traditional iron and steelmaking industries that want to understand this novel electrochemical technology outside their conventional blast furnace direct reduced iron and electric arc smelting processes Finally the monograph may be of interest to persons in the steelmaking industries occupying managerial positions such as chief executives chief operating officers and V P of operations The following topics are covered Background markets and prior art Electrochemical calculations and figures of merit Selection of industrial electrodes and membranes Electrochemical reactor design and performances Industrial electrowinning plant calculations Prototype and pilot testing
