The Emergence of Meaning Stephen Crain,2012-08-30 Over the past forty years scientists have developed models of human reasoning based on the principle that human languages and classical logic involve fundamentally different concepts and different methods of interpretation In *The Emergence of Meaning* Stephen Crain challenges this view arguing that a common logical nativism underpins human language and logical reasoning The approach which Crain takes is twofold Firstly he uncovers the underlying meanings of logical expressions and logical principles that appear in typologically different languages English and Mandarin Chinese and he demonstrates that these meanings and principles directly correspond to the expressions and structures of classical logic Secondly he reports the findings of new experimental studies which investigate how children acquire the logical concepts of these languages A step by step introduction to logic and a comprehensive review of the literature on child language acquisition make this work accessible to those unfamiliar with either field
