Styles Of Scientific Thinking In The European Tradition:

Styles of Scientific Thinking in the European Tradition Alistair Cameron Crombie, 1994
tradi Crombie v 3 The Cambridge History of Science: Volume 3, Early Modern Science David C. Lindberg, Katharine Park, Ronald L. Numbers, Roy Porter, 2003
An account of European knowledge of the natural world c 1500 1700 **Styles of Mathematization: The Case of 18th Century Electrostatics** Lucas Marcelo Cavalari Nardi, 2025-08-16
This book studies the mathematization of physics with a special emphasis on 18th century electrostatics as a case study
The mathematization of a scientific field is a fruitful yet underdeveloped topic that can be seen through different lenses
A noticeable one is the Inferential Conception proposed by Mark Colyvan and Otávio Bueno
In this regard the use of mathematics is understood as a set of mappings relating the physical realm and the mathematical realm
However the historical process related to the use of mathematics remains unsolved
philosophical frameworks usually have a hard time dealing with historical dimensionality
Therefore this book provides a study of the historical process of mathematization going beyond the framework in order to explain the use of mathematics a historically using the aforementioned investigation of 18th century electrostatics
The research developed gravitates around two centers the history of physics and the philosophy of science making the book of equal importance to both historians and philosophers of science *Handbook for the Historiography of Science* Mauro L. Condé, Marlon Salomon, 2023-09-30
This book aims to perform a critical and broad assessment of the historiography of science produced from the late nineteenth century to the early twenty first century
It presents its main authors concepts ideas conceptions and schools
It also analyzes the historical circumstances of the rise of the discipline history of science and the relations of the historiography of science with related areas
These chapters do not understand the historiography of science as a mere description or record of the history of science
Instead they understand the historiography of science from the epistemological criteria and choices that guided the writing of the history of science in its different contexts
In other words more than describing the record of the various possibilities of historiographical approaches to science the chapters carry out an epistemological reflection to assess the bases possibilities scope and limits of different historiographical conceptions authors and traditions that have established the writing of the history of science
This book can be conceived as a reference work not only for professional historians and philosophers but also for academics from different backgrounds who are initiating themselves in the universe of history and philosophy of science be they scientists from different fields or young researchers from different backgrounds who want to start studying the history and philosophy of science The Oxford Companion to the History of Modern Science John L. Truth and Suffering Paulo Beer , 2024-03-20 Although truth occupies a central position in philosophy and the philosophy of science there is much debate about its actual role in scientific practice Truth and Suffering explores different conceptions of truth and their profound influence on our understanding and approach to suffering By discussing how different definitions of truth shape distinct ways of producing knowledge the analysis prompts reflection on the impact of knowledge production on people s lives Drawing on the work of authors from psychoanalysis and the philosophy of science this book challenges dominant mental health paradigms particularly the hegemony of biologic psychiatry It resists attempts to naturalise symptoms and emphasises the need for ethical and political factors to be consistently taken into account when addressing suffering Offering a clear and original approach to an important and complex debate Truth and Suffering is of interest not only to specialist readers in a variety of fields ranging from philosophy of science to psychoanalysis but also provides an introduction to newcomers interested in these discussions

Ludwig Boltzmann: His Later Life and Philosophy, 1900-1906 J.T. Blackmore, 1995-07-31 After his failure to replace metaphysics by a linguistic approach Ludwig Boltzmann came to identify the philosophy of science with methodology which in turn he considered to be part of science itself and thus not part of philosophy at all His definition of philosophy as metaphysics meant that from his point of view all philosophers were metaphysicians himself included Boltzmann the philosopher was advised on the improvement of his *Weltanschauung* by Franz Brentano to such effect that by the summer of 1905 Boltzmann appeared to be close to a form of critical realism However the stronger this realism became the more inconsistent it seemed to be with his Mach plus pictures methodology of science During this period he planned to write a book first on metaphysics and then later on what he called A priori probability and what he considered to be its shortcomings Apparently the book was never completed All know Boltzmann the great physicist Much less widely known is that he was an original philosopher one who had a great impact on early 20th Century Viennese philosophy beginning with Wittgenstein and the Vienna Circle and extending even to Popper and Feyerabend Blackmore's delving into Boltzmann's correspondence coupled with his unparalleled knowledge of Boltzmann's final years allows him to present Boltzmann in an entirely new light to readers in the English language For physicists philosophers and historians

Structures of Feeling in Seventeenth-Century Cultural Expression Susan McClary, 2013-03-04 Between the waning of the Renaissance and the beginning of the Enlightenment many fundamental aspects of human behaviour from expressions of gender to the experience of time underwent radical changes While some of these transformations were recorded in words others have survived in non verbal cultural media notably the visual arts poetry theatre music and dance *Structures of Feeling in Seventeenth Century*

Cultural Expression explores how artists made use of these various cultural forms to grapple with human values in the increasingly heterodox world of the 1600s Essays from prominent historians musicologists and art critics examine methods of non verbal cultural expression through the broad themes of time motion the body and global relations Together they show that seventeenth century cultural expression was more than just an embryonic stage within Western artistic development Instead the contributors argue that this period marks some of the most profound changes in European subjectivities

Cultures without Culturalism Karine Chemla,Evelyn Fox Keller,2017-03-23 Cultural accounts of scientific ideas and practices have increasingly come to be welcomed as a corrective to previous and still widely held theories of scientific knowledge and practices as universal The editors caution however against the temptation to overgeneralize the work of culture and to lapse into a kind of essentialism that flattens the range and variety of scientific work The book refers to this tendency as culturalism The contributors to the volume model a new path where historicized and cultural accounts of scientific practice retain their specificity and complexity without falling into the traps of culturalism They examine among other issues the potential of using notions of culture to study behavior in financial markets the ideology organization and practice of earthquake monitoring and prediction during China s Cultural Revolution the history of quadratic equations in China and how studying the glass ceiling and employment discrimination became accepted in the social sciences Demonstrating the need to understand the work of culture as a fluid and dynamic process that directly both shapes and is shaped by scientific practice Cultures without Culturalism makes an important intervention in science studies Contributors Bruno Belhoste Karine Chemla Caroline Ehrhardt Fa ti Fan Kenji Ito Evelyn Fox Keller Guillaume Lachenal Donald MacKenzie Mary S Morgan Nancy J Nersessian David Rabouin Hans J rg Rheinberger Claude Rosental Koen Vermeir
