**Death from the Skies!** Philip Plait, Ph.D.,2008-10-16 A lively astronomy primer that uses cataclysmic scenarios to explain the universe s most fascinating events According to astronomer Philip Plait the universe is an apocalypse waiting to happen But how much do we really need to fear from things like black holes gamma ray bursts and supernovae And if we should be scared is there anything we can do to save ourselves With humor and wit Plait details the myriad doomsday events that the cosmos could send our way to destroy our planet and life as we know it This authoritative yet accessible study is the ultimate astronomy lesson Combining fascinating and often alarming scenarios that seem plucked from science fiction with the latest research and opinions Plait illustrates why outer space is not as remote as most people think Each chapter explores a different phenomenon explaining it in easy to understand terms and considering how life on earth and the planet itself would be affected should the event come to pass Rather than sensationalizing the information Plait analyzes the probability of these catastrophes occurring in our lifetimes and what we can do to stop them With its entertaining tone and enlightening explanation of unfathomable concepts Death from the Skies will appeal to science buffs and beginners alike **The Florida Night Sky** Elinor De Wire,2002 The Florida night sky is a source of fascination inspiration and enjoyment Whether your aim is a casual appreciation of the heavens or a serious study of astronomy The Florida Night Sky will get you started on a rewarding journey of cosmic discovery beginning with how the known universe is organized and where Florida fits into the picture Every place on earth has its own singular view of the stars and Florida is no different Theres an enviable openness to the Florida landscape and flat horizon allowing for a broader view of the sky in all directions The warm snowless winter nights with their long periods of darkness are ideal for stargazing and Florida s position near the tropics offers a view of the four stars in the Southern Cross in the spring and early summer The two coasts offer stunning views of the sun rising and setting in the water watch for the Green Flash as the sun finally drops into the ocean on the Gulf Coast An ideal starting point for those who want to learn about the Florida night sky and enjoy its treasures this book also serves as a helpful reference for serious amateur astronomers Step outside look up and get acquainted with the Florida night The rewards will

surprise and delight you      **Classes of Supernovae ,      The universe is intelligent. The soul exists.** George Anderson,2019-08-26 Pages 270 Illustrated The incredible discoveries of quantum physics are completely upsetting the assumptions of classical science Today the technique allows amazing achievements For example the first quantum computers with almost unlimited computing capabilities are being realized Some support the real possibility of time travel In addition to these innovations known to the general public there are others less known but no less important They are the novelties deriving from quantum studies among which we can mention the superposition of states and the quantum collapse The superposition of states confirms that the same particle can be found simultaneously in two or more places The theory of quantum collapse confirms that the behavior of matter can be decided simply by observation These are not assumptions but principles verified experimentally This book does not only deal with these innovations but gives much space to more advanced theories These are theories announced but not yet confirmed Furthermore the book also evaluates the most risky theories provided they are scientifically based For example the book talks about the multiverse or theory of parallel universes proposed by the physicist Hugh Everett In the same way the book speaks of non locality It is a psychic space totally independent of the laws of classical physics As a result of non locality elementary particles located at astronomical distances behave as if they were one This book also talks about the latest research by Roger Penrose an unbelieving physicist and Stuart Hameroff According to these two scientists the soul exists and can be identified with quantum fluctuations These fluctuations have the ability to survive the physical death of the body If really the souls are condensations of quantum fluctuations we can formulate a question will it ever be possible to devise instruments that allow dialogue with these fluctuations The book exposes the research of established scientists but without using any mathematical formula The theories are exposed in a simple and understandable way to everyone In this way everyone can discover the unsuspected aspects of the reality in which we live It is clear that quantum physics is decreeing the end of materialism and the beginning of a new cultural phase based on the collaboration between spirit and matter      Gamma Ray Large Area Space Telescope ,1998

Mosaic ,1990      **Matter ,      Timelines of Science** DK,2013-09-16 From the wheel to the worldwide web our planet has been transformed by science Now you can travel through time to experience centuries of invention and innovation on this spectacular visual voyage of discovery Starting in ancient times and ending up in the modern world you ll explore scientific history showcased in stunning images and captivating text An easy to follow illustrated timeline runs throughout the ebook keeping you informed of big breakthroughs and key developments Get to grips with revolutionary ideas like measuring time or check out amazing artifacts like flying machines Great geniuses including Marie Curie Albert Einstein and Charles Darwin are introduced alongside their most important ideas and inventions all shown in glorious detail Hundreds of pages of history are covered in Timelines of Science with global coverage of scientific advances Whether you re joining in with eureka moments inspecting engines or learning about evolution all aspects of science are covered from the past present and future

Tweeting the Universe Govert Schilling, Marcus Chown, 2011-11-01 In 140 pages two masterly popularisers present 140 explanations of the biggest questions in physics in the form of 10 or so tweets per page They set themselves the challenge of boiling down what is essential on each subject into sentences of 140 characters and the results are both entertaining and brilliantly informative Not a word is wasted The reader is not patronized and learns something on every page If only all science writing could be so precise and so economical Only science writers of a very high calibre could achieve such compression Marcus Chown the finest cosmology writer of our day Matt Ridley has known the Dutch writer Govert Schilling for twenty years Schilling pioneered this very swift form of explanation in a Dutch newspaper and suggested to Chown that they collaborate on bringing it to a wider audience Tweeting the Universe is unlike any other science book
