Submillimetre Wave Astronomy:

Submillimetre Wave Astronomy J. E. Beckman, J. P. Phillips, 1982 *Development of Coherent Detector Technologies for Sub-Millimetre Wave Astronomy Observations* Boon Kok Tan, 2015-09-15 The thesis describes the development of receiver technologies for sub millimetre astronomy instruments focusing on high performance coherent cryogenic detectors operating close to the superconductor gap frequency The mixer chip which comprises the SIS devices fed by a unilateral finline and matching planar circuits was fabricated on 15 micron silicon substrate using the recently developed Silicon On Insulator SOI technology This offered broadband IF and RF performance with fully integrated on chip planar circuits resulting in an easily reproducible mixer chip and a simple mixer block An important consequence of this design is that it can be extended to the supra THz region and making the fabrication of multi pixel heterodyne arrays feasible The extension of the operation of major telescopes such as ALMA APEX and the GLT from single pixel to large format arrays is the subject of extensive research at present time since it will allow fast mapping combined with high resolution of the submillimetre sky The technology described in this thesis makes a major contribution to this effort Principles of Planar Near-Field Antenna Measurements

Stuart Gregson, John McCormick, Clive Parini, 2007-12-31 This single volume provides a comprehensive introduction and explanation of both the theory and practice of Planar Near Field Antenna Measurement from its basic postulates and assumptions to the intricacies of its deployment in complex and demanding measurement scenarios To do this the book initially examines the properties of antennas that allow them to enhance the free space interaction of electronic systems and this leads into a full description of the theory of Planar Near Field Scanning **The Infrared and**

Particle Physics and Astrophysics J. Thanh Van Tran, Van Hiều Nguyễn, 1995 Next Generation Infrared Space Observatory S.J. Bell Burnell, J.K. Davies, R.S. Stobie, 2012-12-06 Infrared astronomy has undergone an enormous revolution during the last decade Despite the great technical difficulties of building detectors in a cryogenic environment the scientific advances in infrared astronomy have been astounding In the near future many more advances can be expected from still newer developments in telescope and detector designs High quality detector arrays and passively cooled telescopes are very

promising techniques for achieving considerably larger apertures This volume contains the refereed papers from the workshop on Next Generation Infrared Observatory dealing with all new aspects of future infrared telescopes Inventing a Space Mission Vincent Minier, Roger-Maurice Bonnet, Vincent Bontems, Thijs de Graauw, Matt Griffin, Frank Helmich, Göran Pilbratt, Sergio Volonte, 2017-11-26 This book describes prominent technological achievements within a very successful space science mission the Herschel space observatory Focusing on the various processes of innovation it offers an analysis and discussion of the social technological and scientific context of the mission that paved the way to its development It addresses the key question raised by these processes in our modern society i e how knowledge management of innovation set the conditions for inventing the future In that respect the book is based on a transdisciplinary analysis of the programmatic complexity of Herschel with inputs from space scientists managers philosophers and engineers This book is addressed to decision makers not only in space science but also in other industries and sciences using or building large machines It is also addressed to space engineers and scientists as well as students in science and management **The Cosmic Dust**

Connection J. Mayo Greenberg, 2012-12-06 Solid particles are followed from their creation through their evolution in the Galaxy to their participation in the formation of solar systems like our own these being now clearly deduced from observations by the Hubble Space Telescope as well as by IR and visual observations of protostellar disks like that of the famous Beta Pictoris object The most recent observational laboratory and theoretical methods are examined in detail In our own solar system studies of meteorites comets and comet dust reveal many features that follow directly from the interstellar dust from which they formed The properties of interstellar dust provide possible keys to its origin in comets and asteroids and its ultimate origin in the early solar system But this is a continuing story what happens to the solid particles in space after they emerge from stellar sources has important scientific consequences since it ultimately bears on our own origins the origins of solar systems and especially of our own earth and life in the universe *The Chemically Controlled Cosmos* T. W. Hartquist, D. A. Williams, 1995-12-07 Simple chemistry governs a host of the exotic objects that populate our cosmos For example molecules in the early Universe acted as natural temperature regulators keeping the primordial gas cool and in turn allowing galaxies and stars to form What are the tools of the trade for the cosmic chemist and what can they teach us about the Universe we live in These are the questions answered in this engaging and informative guide the first book for nonspecialists on molecular astrophysics In clear nontechnical terms and without formal mathematics Hartquist and Williams show how to study and understand the behavior of molecules in a host of astronomical situations Readers will learn about the secretive formation of stars deep within interstellar clouds the origin of our own solar system the cataclysmic deaths of many massive stars that explode as supernovae and the hearts of active galactic nuclei the most powerful objects in the universe This book provides an accessible introduction to a wealth of astrophysics and an understanding of how cosmic chemistry allows the investigation of many of the most exciting questions concerning astronomy today Japanese National Large

Sensing with Terahertz Radiation Daniel Mittleman, 2013-02-26 One aspect of the field of THz radiation is the marriage of microwave and optical techniques By its very nature THz radiation bridges the gap between the microwave and optical regimes The former can be characterized by the fact that most devices are comparable in size to the wavelength of the radiation As a result the propagation of energy in these devices is generally in the form of single mode or low order mode guided waves In contrast the optical and infrared ranges are generally characterized by beams containing many modes with dimensions much larger than the wavelength Of course there are exceptions to these rules notably the single mode propagation of optical radiation in fibers Nonetheless the general description holds true Because of these fundamental differences it is natural that the techniques used in their implementation are quite distinct Much of the research in the THz

field has been based on the melding of these disparate ideas

Formation and Evolution of Solids in Space J. Mayo Greenberg, Aigen Li, 2012-12-06 Interstellar dust meteorites interplanetary dust particles IDP s the zodiacal light comets comet dust Where do they come from what are they made of how do they evolve and finally are there connections between them These are the questions discussed in this volume by some of the world s outstanding experts in their respective fields The techniques used for studying the small solid objects of space are thoroughly discussed Some of the methods involve a synthetic approach using the laboratory to create analog environments and materials which are believed to resemble those in space Others use direct laboratory methods with state of the art analytical tools to study the material of the objects themselves meteorites IDP S And others apply the latest in astronomical facilities to provide quantitative data on the material properties of the solids which can only be deduced from remote observations These are compared with the laboratory results In one instance there was a possibility to study a solar system body in situ and that was the case of comet Halley and some of the results of these studies obtained from space laboratories launched to meet it are discussed here Finally there are theoretical papers which are aimed at bridging the results of observational and laboratory methods This

book is recommended to senior scientists as well as graduate students who wish to pursue research in interstellar and solar system astronomy and their connections
