Elsenhans,2021-09-08 The dominant neoliberal approach presents politics and political economy as nuisances which disturb the smooth operation of self regulating markets But political economy is not merely an academic issue it is a class issue and this book forcefully argues that political economy should return to a central position in the study of the social sciences Offering nothing less than a reconciliation of Marxian Keynesian and neoclassical economics the work opens with a discussion of the key interconnected economic concepts which help us to understand capitalism price income profit value growth and crisis Prices reflect income distribution and therefore class relations and the chapters show that the very emergence of capitalism resulted from mass empowerment of the so called lower orders Profit is always available if entrepreneurs spend on net investment and create incomes for additional labour this in turn requires expanding demand and so therefore profit depends on rising mass incomes Conversely underdevelopment is the result of the destitution and disempowerment of the masses In the Global South today it is clear that enormous riches go hand in hand with widespread misery and poverty because the market does not transform wealth into the kind of investment that might benefit all This book argues that the new wealth triggered by productivity increases has enabled the rich to liberate themselves from the capitalist constraints of competition and waste their new wealth in the form of rents The main threat today is in fact the globalisation of rent The text makes a point for a progressive counter strategy capitalist structures that empower labour need to be transferred to the Global South This requires political and economic efforts towards empowering labour in the Global South This book demonstrates the analytical power of political economy for all social scientists and will be invaluable reading for economists political scientists and sociologists in particular *The psychology of speculation : The human element in stock market transactions* Henry Howard Harper,2025-03-02 In *The Psychology of Speculation The Human Element in Stock Market Transactions* Henry Howard Harper delves into the often overlooked psychological aspects that influence investor behavior and market trends Through a blend of empirical analysis and theoretical insight Harper articulates how emotions cognitive biases and social dynamics play pivotal roles in stock market transactions Utilizing a narrative style infused with relevant case studies he frames speculation not merely as a financial gamble but as a complex interplay of human motivations and psychological phenomena bridging the gap between economics and psychology in a manner that invites both academic inquiry and practical reflection Henry Howard Harper a scholar with a profound interest in behavioral finance draws from his extensive background in both economics and psychology to craft this incisive work His research highlights the inadequacies of traditional financial models that often overlook the human dimensions of trading Harper s unique perspective is informed by his own experiences in the stock market prompting him to challenge prevailing notions of rational

behavior and illuminate the fluctuating emotional undercurrents that drive market activity This compelling read is essential for both investors seeking a deeper understanding of their own decision making processes and scholars interested in the intersection of psychology and finance Harper s insights invite readers to reconsider the motivations behind market actions and emphasize the importance of psychological literacy in navigating the complex world of speculation **The Magazine of Wall Street** ,1924 Magazine of Wall Street and Business Analyst ,1928 **The Digital War** Winston Ma,2021-01-19
