*Multimodal Usability* Niels Ole Bernsen,Laila Dybkjær,2009-10-03 This preface tells the story of how Multimodal Usability responds to a special challenge Chapter 1 describes the goals and structure of this book The idea of describing how to make multimodal computer systems usable arose in the European Network of Excellence SIMILAR Taskforce for cre ing human machine interfaces SIMILAR to human human communication 2003 2007 www similar cc SIMILAR brought together people from multimodal signal processing and usability with the aim of creating enabling technologies for new kinds of multimodal systems and demonstrating results in research prototypes Most of our colleagues in the network were in fact busy extracting features and guring out how to demonstrate progress in working interactive systems while claiming not to have too much of a notion of usability in system development and evaluation It was proposed

that the authors support the usability of the many multimodal prototypes underway by researching and presenting a methodology for building usable multimodal systems. We accepted the challenge first and foremost no doubt because the formidable team spirit in SIMILAR could make people accept outrageous things. Second, having worked for nearly two decades on making multimodal systems usable, we were curious at the opportunity to try to understand what happens to traditional usability work that is work in human computer interaction centred around traditional graphical user interfaces. GUIs when systems become as multimodal and as advanced in other ways as those we build in research today.
