

de análisis del rol de los centros urbanos en las regiones. Su enfoque está dirigido hacia la comprensión de los elementos urbanos que permiten establecer jerarquías entre los diversos centros por su relación con la región que éstos están sirviendo. Una segunda contribución del profesor Labasse⁹ habla del equipamiento terciario superior —definido como los servicios altamente especializados y los centros de decisión— como un elemento fundamental en la comprensión del fenómeno de jerarquización en la Europa occidental actual. Basa la zona de atracción de las metrópolis en la densidad más o menos alta de tal tipo de equipamiento en estos centros. Termina su participación con un análisis del caso de Francia en que, tomando la perspectiva histórica, expone las fluctuaciones del poder de atracción de los diversos centros actuales. Marie-Andrée Prost¹⁰ a continuación, hace una presentación crítica de los diversos métodos de jerarquización de ciudades, empleados tanto en Estados Unidos como en Francia, mediante los conceptos de base económica y dominación. Esta desarrolla un método propio de jerarquización mediante el análisis del conjunto de actividades urbanas. Los profesores Antoine y Weill¹¹ cierran la obra con una discusión muy interesante sobre la política de las metrópolis de equilibrio en Francia, como elementos que contrarresten la centralización parisiense. La forma de análisis se basa, fundamentalmente, en las relaciones entre la metrópoli y sus regiones ya que consideran la metrópoli como un todo con su región funcional por ser el elemento más dinámico de la unidad. La metodología de análisis y de exposición en sí es interesante por la claridad y sistematización con que los conceptos teóricos son llevados a la práctica.

Como se decía en un comienzo, este libro presenta los avances más recientes de los geógrafos y economistas sobre los conceptos espaciales de las actividades económicas. Parece fundamental insistir sobre la importancia que tiene el análisis de distribución espacial de la economía como complemento del estudio a nivel nacional. Sin una noción clara de ellos tendremos siempre una visión demasiado agregada de los fenómenos, aunque lleguemos a una desagregación sectorial óptima. El análisis regional toma cada día mayor relevancia en la determinación de políticas de desarrollo tanto como en los procesos de planificación en todos sus niveles.

W. PAUL STRASSMANN, *Technological Change and Economic Development: the Manufacturing Experience of Mexico and Puerto Rico*. Ithaca, Nueva York, Cornell University Press, 1968. 353 pp.

Se trata de un examen del cambio tecnológico y su relación con el desarrollo económico, mediante el análisis general del problema y a través de ejemplos extraídos de la experiencia de México y Puerto Rico, a base de una pequeña muestra de empresas. El tema es especialmente interesante porque incluye el análisis de las posibilidades de elevar la productividad

Transformation in the Third World: Volume 3 Surendra J. Patel, 2018-03-26 Originally published in 1993 this book contains 3 studies from Latin America Mexico Puerto Rico and Venezuela These studies bring out sharply the processes at work in Latin America between 1950 and 1980 which were responsible for the crisis that the continent faced in the 1980s In each case there was a striking failure in building up national technological capability so that the country could grapple with the problems it faced *Technology and the Search for Progress in Modern Mexico* Edward Beatty, 2015-04-30 In the late nineteenth century Mexican citizens quickly adopted new technologies imported from abroad to sew cloth manufacture glass bottles refine minerals and provide many goods and services Rapid technological change supported economic growth and also brought cultural change and social dislocation Drawing on three detailed case studies the sewing machine a glass bottle blowing factory and the cyanide process for gold and silver refining Edward Beatty explores a central paradox of economic growth in nineteenth century Mexico while Mexicans made significant efforts to integrate new machines and products difficulties in assimilating the skills required to use emerging technologies resulted in a persistent dependence on international expertise The University System and Economic Development in Mexico Since 1929 David Lorey, 1993-11-01 For decades Mexican leaders and scholars as well as outside observers have spoken of a Mexican university system in crisis expressing concern over student political activism and violence declining quality of instruction and facilities crowded campuses and lack of employment for graduates When the government harshly suppressed a student movement in 1968 world attention focused on the turmoil that was endemic in university life During the severe economic slump of the 1980s the fundamental weaknesses of the Mexican economy its inefficiency and inability to compete in the world were often attributed to failings of the university system Using original quantitative data on the graduates of all Mexican universities in a dozen major professional fields since 1929 the author explores the nature of this purported crisis by examining a series of questions about the Mexican university system How have the changing policy priorities of the Mexican government affected the university's education of professionals How have the Mexican economy's needs for professionals shaped the functioning of the university system Has Mexico trained enough professionals Have they been trained in the right fields Has the university been able to respond to demands for upward mobility through higher education The author's detailed analysis reveals a paradox to the extent that Mexican universities may not be producing the kinds of expertise needed for competing in the new global marketplace that educational quality has declined gradually over time and that the university has not contributed much to social mobility one may indeed speak of a crisis Yet because the university system has reached its present form in

response to demands placed on it be government the economy and society responding pragmatically to circumstances beyond its control the author concludes that the crisis is not fundamentally a university crisis but rather one that lies in Mexican economy and society at large **The Economics of Technological Progress** Tonu Puu,Soren Wibe,1980-12-11
