Lichtarowicz, 2012-12-06 This volume contains papers presented at the 11th International Conference on Jet Cutting Technology held at St Andrews Scotland on 8-10 September 1992. Jetting techniques have been successfully applied for many years in the field of cleaning and descaling. Today, however, jet cutting is used in operations as diverse as removing cancerous growths from the human body, decommissioning sunsea installations and disabling explosive munitions. The diversity is reflected in the papers presented at the conference. The papers were divided into several main sections: jetting basics, materials, jetting basics, fluid mechanics, mining and quarrying, civil engineering, new developments, petrochem, cleaning and surface treatment and manufacturing. The high quality of papers presented at the conference has further reinforced its position as the premier event in the field. Shock Wave Science and Technology Reference Library, Vol. 3 Yasuyuki Horie, 2008-09-18 This book is the second volume of Solids Volumes in the Shock Wave Science and Technology Reference Library. These volumes are primarily concerned with high pressure shock waves in solid media, including detonation and high velocity impact and penetration events. This volume contains four articles. The first two describe the reactive behavior of condensed phase explosives and the remaining two discuss the inert mechanical response of solid materials. The articles are each self-contained and can be read independently of each other. They offer a timely reference for beginners as well as professional scientists and engineers covering the foundations and the latest progress and include burgeoning development as well as challenging unsolved problems. The first chapter by S. Sheld and R. Engelke discusses the shock initiation and detonation phenomena of solids explosives. The article is an outgrowth of two previous review articles: Explosives in vol. 6 of Encyclopedia of Applied Physics VCH 1993 and Initiation and Propagation of Detonation in Condensed Phase High Explosives in High Pressure Shock Compression of Solids III Springer 1998. This article is not only an updated review but also offers a concise heuristic introduction to shock waves and

condensed phase detonation The authors emphasize the point that detonation is not an uncontrollable chaotic event but that it is an orderly event that is governed by and is describable in terms of the conservation of mass momentum energy and certain material specific properties of the explosive Proceedings of SAKURA Symposium on Surface Technology and Engineering Materials 2022 Mohd Fadzli Bin Abdollah,2022-11-15 This e book is a compilation of papers presented at the SAKURA Symposium on Surface Technology and Engineering Materials SAKURA2022 Nagoya Japan on 17 October 2022 Soviet Science and Technology ,1987 **High-Pressure Science and Technology** K.
