## **Technological Planning And Social Futures:**

**Technological Planning and Social Futures** Erich Jantsch, 1974      **The Study of the Future**, 1977      *Technology, Pessimism, and Postmodernism* Yaron Ezrahi, E. Mendelsohn, Howard Segal, 2013-03-07 HOWARD P SEGAL FOR THE EDITORS In November 1979 the Humanities Department of the University of Michigan's College of Engineering sponsored a symposium on Technology and Pessimism. The symposium included scholars from a variety of fields and carefully balanced critics and defenders of modern technology broadly defined. Although by this point it was hardly revolutionary to suggest that technology was no longer automatically equated with optimism and in turn with unceasing social advance, the idea of linking technology so explicitly with pessimism was bound to attract attention. Among others, John Noble Wilford, a New York Times science and technology correspondent, not only covered the symposium but also wrote about it at length in the Times the following week. As Wilford observed, whatever their disagreements, the participants agreed that a mood of pessimism is overtaking and may have already displaced the old optimistic view of history as a steady and cumulative expansion of human power, the idea of inevitable progress born in the Scientific and Industrial Revolutions and dominant in the 19th century and for at least the first half of this century. Such pessimism, he continued, is fed by growing doubts about society's ability to rein in the seemingly runaway forces of technology, though the participants conceded that in many instances technology was more the symbol than the substance of the problem.

**Routledge Handbook of Social Futures** Carlos López Galviz, Emily Spiers, 2021-11-22. Featuring chapters from an international range of leading and emerging scholars, this Handbook provides a collection of cutting edge interdisciplinary research that sheds new light on contemporary futures studies. Engaging with key defining questions of the early twenty first century such as climate change, big data, AI, the future of economics, education, mental health, cities, and more, the Handbook provides a review and synthesis of futures scholarship, highlighting the role that societies can and should play in their making. While the various chapters demonstrate how futures emerge and take shape in particular places at particular times, the distinctive insight provided by the volume overall is that futures thinking today must be social and contextual. By presenting a range of futures work from contexts around the globe, the Handbook contextualizes techniques, forecasting, backcasting, scenario planning, collaboration, and co-production to ask how different dimensions of the social are created and circulated in the process. Through its thirty chapters, the volume explores and interrogates narratives, anticipations, enactments, ecologies, collaborations, prospectives, and so on to highlight which versions of the social are legitimized and which are encouraged and foreclosed. This Handbook opens an important conversation about the centrality of the social in futures thinking. By bringing arts, humanities, and social sciences scholars and practitioners into conversation with biologists, environmental, climate, and computer scientists, this volume seeks to encourage new pathways across and within multiple disciplines to interrogate the futures we need and want. The social must be our starting point if we are to steer our planet in a direction that supports good lives for the many everywhere.
