Technological Society:

The Technological Society Jacques Ellul, 2021-07-27 As insightful and wise today as it was when originally published in 1954 Jacques Ellul's *The Technological Society* has become a classic in its field laying the groundwork for all other studies of technology and society that have followed Ellul offers a penetrating analysis of our technological civilization showing how technology which began innocuously enough as a servant of humankind threatens to overthrow humanity itself in its ongoing creation of an environment that meets its own ends No conversation about the dangers of technology and its unavoidable effects on society can begin without a careful reading of this book A magnificent book He goes through one human activity after another and shows how it has been technicized rendered efficient and diminished in the process Harper's One of the most important books of the second half of the twentieth century In it Jacques Ellul convincingly demonstrates that technology which we continue to conceptualize as the servant of man will overthrow everything that prevents the internal logic of its development including humanity itself unless we take necessary steps to move human society out of the environment that technique is creating to meet its own needs *The Nation* A description of the way in which technology has become completely autonomous and is in the process of taking over the traditional values of every society without exception subverting and suppressing these values to produce at last a monolithic world culture in which all non technological difference and variety are mere appearance Los Angeles Free Press **The Technological System** Jacques

Ellul, 2018-06-11 Some 20 years after writing *The Technological Society* Jacques Ellul realized how the totalistic dimensions of our modern technological milieu required an additional treatment of the topic Writing amidst the rise of books in the 1970s on pollution over population and environmental degradation Ellul found it necessary once again to write about the global presence of technology and its far reaching effects *The Technological System* represents a new stage in Ellul's research Previously he studied technological society as such in this book he approaches the topic from a systems perspective wherein he identifies the characteristics of technological phenomena and technological progress in light of system theory This leads to an entirely new approach to what constitutes the most important event of our society which has decisive bearing on the future of our world Ellul's analysis touches on all aspects of modern life not just those of a scientific or technological order In the end readers are compelled to formulate their own opinions and make their own decisions regarding the way a technique based value system affects every level of human life *The Technological Society* Jacques Ellul, 1967 **Jacques Ellul and the Technological Society in the 21st Century**, 2013 Post-secondary Education in a Technological Society T. Faith, Hope, and Love in the Technological Society Franz A. Foltz, Frederick A. Foltz, 2018-07-31 Franz and Frederick Foltz examine how modern technology creates an environment that significantly affects Christianity by reducing the mysteries of faith to manageable techniques. The body of their work analyzes the effects of technology on the theological virtues of faith, hope, and love, the triad that believers have used for a common narrative to understand and express their thoughts and experiences. They begin by looking at how recent developments have brought us into a post-truth era by removing words from their context in nature, time, place, and community. Popular theologies such as the power of positive thinking, the laws of creation, the plan for salvation, and the prosperity gospel reflect this change by gearing all for efficiently getting what we want and ignoring tradition. The authors then examine each of the virtues separately, finding that faith has become a risk management tool that depends on confidence in systems rather than personal relationships; hope is defined as the expectation that our present desires shall be granted rather than a vision of the future; and love has become an intimacy that provides escape from the real world and community rather than a self-denying care for them. Finally, the authors take a look at some appropriate responses.

The End of Ethics in a Technological Society Lawrence Schmidt, Scott Louis Marratto, 2008 This book offers a bold challenge to modern liberal ethics by exposing its inability to confront the inexorable advance of technology. Contemporary books on technology generally fall into three categories: those that offer optimistic projections of a glorious future; those that provide radical critiques of specific techniques; and those that express alarm about the dehumanizing effects of a culture dominated by technology. *The End of Ethics in a Technological Society* offers a deeper assessment of the modern West's commitment to technological progress. It argues that modern technology, ethics, and politics are all expressions of the enlightenment view that there are no principles of truth or goodness higher than the free human will. Technological advances are, on this view, merely extensions of the range of human freedom. Modern ethics thus fails to give voice to our often inchoate moral intuition that in the realm of techno-science, some possibilities simply ought not to be pursued. The authors develop their challenge by examining typical ethical approaches to such urgent contemporary concerns as environmental degradation, nuclear energy, high-tech militarism, and fetal genetic testing. They relate our social crises to the transformation of ethics that has taken place as technology has become the house in which we all live.

Jacques Ellul and the Technological Society in the 21st Century Helena M. Jerónimo, José Luís García, Carl Mitcham, 2013-07-08 This volume rethinks the work of Jacques Ellul (1912-1994) on the centenary of his birth by presenting an overview of the current debates based on Ellul's insights. As one of the most significant twentieth-century thinkers about technology, Ellul was among the first thinkers to realize the importance of topics such as globalization, terrorism,

communication technologies and ecology and study them from a technological perspective The book is divided into three sections The first discusses Ellul s diagnosis of modern society and addresses the reception of his work on the technological society the notion of efficiency the process of symbolization de symbolization and ecology The second analyzes communicational and cultural problems as well as threats and trends in early twenty first century societies Many of the issues Ellul saw as crucial such as energy propaganda applied life sciences and communication continue to be so In fact they have grown exponentially on a global scale producing new forms of risk Essays in the final section examine the duality of reason and revelation They pursue an understanding of Ellul in terms of the depth of experience and the traditions of human knowledge which is to say on the one hand the experience of the human being as contained in the rationalist sociological and philosophical traditions On the other hand there are the transcendent roots of human existence as well as revealed knowledge in the mystical and religious traditions The meeting of these two traditions enables us to look at Ellul s work as a whole but above all it opens up a space for examining religious life in the technological society

Democracy in a Technological Society L. Winner, 2013-03-09 This ninth volume is one of the most ambitious in the Philosophy and Technology series Edited by technopolitical philosopher Langdon Winner it assembles an impressive collection of philosophers and political theorists to discuss one of the most important topics of the end of the twentieth century the bearing of technology in all its ramifications on the practice of democratic politics in the developed world When set beside the previous volume in the series *Europe America and Technology* the two together open a philosophical dialogue of great significance about the ways technology challenges democracy at its very roots Some philosophers think the attack is fatal Others are optimistic that democratic means can be discovered or invented for the control of technology Still others object to an optimism versus pessimism formulation of the issue But all agree that the issue is highly significant one that demands serious philosophical inquiry The Society for Philosophy and Technology was fortunate in being able to draw this group of writers to Bordeaux France in 1989 along with a large number of others whose contributions to the debate could not be included here It is equally fortunate to have chosen Langdon Winner as president when the time came to select the best of the papers to fashion this volume University of Delaware PAUL T
