Hannas, 2013-03-26 Students in Japan China and Korea are among the world s top performers on standardized math and science tests The nations of East Asia are also leading manufacturers of consumer goods that incorporate scientific breakthroughs in telecommunications optics and transportation Yet there is a startling phenomenon known throughout Asia as the creativity problem While East Asians are able to use science they have not demonstrated the ability to invent radically new systems and paradigms that lead to new technologies In fact the legal and illegal transfer of technology from the West to the East is one of the most contentious international business issues Yet Asians who study and work in the West and depend upon Western languages for their research are among the most creative and talented scientists no less so than their Western counterparts William C Hannas contends that this paradox emerges from the nature of East Asian writing systems which are character based rather than alphabetic Character based orthographies according to the author lack the abstract features of alphabetic writing that model the thought processes necessary for scientific creativity When first learning to read children who are immersed in a character based culture are at a huge disadvantage because such writing systems do not cultivate the ability for abstract thought Despite the overwhelming body of evidence that points to the cognitive side effects the cultural importance of character

based writing makes the adoption of an alphabet unlikely in the near future      *Genetically modified crops in Africa* Falck-Zepeda, José Benjamin, Gruère, Guillaume P., Sithole-Niang, Idah, 2013-10-02 A variable climate political instability and other constraints have limited agricultural development in African countries south of the Sahara Genetically modified GM crops are one tool for enhancing agricultural productivity and food security despite such constraints Genetically Modified Crops in Africa Economic and Policy Lessons from Countries South of the Sahara investigates how this tool might be effectively used by evaluating the benefits costs and risks for African countries of adopting GM crops The authors gather together studies on GM crops economic effects and impact on trade how consumers view such crops and other issues They find that GM crops have had on average a positive economic effect in the nations where they were used and identify future steps for enhancing GM crop adoption s positive effects Promising policy initiatives include making biosafety regulations that do not make GM crop development prohibitively expensive fostering intraregional trade in GM crops and providing more and better information about GM crops to consumers who might currently be skeptical of them These and other findings in Genetically Modified Crops in Africa indicate ways biotechnology can contribute to economic development in Africa south of the Sahara      *Empire, Technology and Seapower* Howard J.
