Abstract

This paper investigates how marketing mix strategies' design affects customer value creation. The paper presents the results of empirical research conducted through a questionnaire that aims to show and determine which elements are key in choosing a bank, the extent to which branches and digital services are used, which affects customer satisfaction, loyalty, and customer experience for quality assessment and what are the reasons why clients would leave the current bank and choose a competing bank. The research results indicate that the availability of products and services is important to clients with support that increases the user experience, the application of innovative technologies in creating new offers, and friendly, educated, and friendly staff and channels. Respondents state the reasons for changing the bank: lack of branches, unfriendly or unprofessional staff, unsatisfactory quality of service, excessive fees, and more.

Keywords: holistic approach; loyalty; marketing strategies; value for the client; satisfaction

Creating Value with Science and Technology Eliezer Geisler, 2001-08-30 Do science and technology create value for society and the economy and how might one go about measuring it How do we evaluate its benefits Can we even be certain that there are benefits Geisler argues that there are benefits and that they outweigh in value the negative impacts that inevitably accompany them His revolutionary new book goes on to show that they can also be measured and evaluated and in one volume all of the existing knowledge on how to do it is compiled then Geisler's own methods are offered The result is a compelling argument that the value of science and technology in our lives has indeed been positive and that the economic well being of all individuals organizations and nations rests upon them Geisler starts off by describing his conceptual framework for the evaluation of science and technology and the impact and benefits that proceed from them He discusses the nature of evaluation in general terms and then in the specific context of science technology and innovation together He reviews the state of our present knowledge and assesses the nature of value creation itself Throughout Geisler remains fixed on his driving thesis Although there are certainly some negative impacts

from science and technology on the whole the results of its outputs are positive He shows how they have contributed to a range of activities and institutions particularly to the improvement of health and human welfare worldwide Finally after discussing the theories of evaluation he gets down to the practice providing readers with a way to assess science and technological innovations for themselves

Creating Value in Financial Services Edward L. Melnick,2000 In identifying the problem of the upheaval in financial services the editors have given the reader a great deal to contemplate They make clear that deregulation is accelerating the blurring of boundaries between insurance commercial banking investment banking and brokerage At the same time the worldwide demographics for the financial services industry have never been better This convergence of competitive change and increasing opportunity make a book like this especially timely one that carefully analyzes the need for specialized financial services and the importance of these services to be delivered efficiently with moderate cost It is increasingly apparent that critical for success in the financial services industry is an innovative flexible management team who can recognize and act on these fast moving developments

Event-Driven Mobile Financial Information Services Jan Muntermann,2007-12-20 Jan Muntermann presents an intraday event study that is conducted within the German capital market and provides evidence that investors could exploit intraday stock price effects following critical market events He then develops the concept for a corresponding mobile decision support system that assists investors in identifying those events Based on the design science research paradigm he uses this concept in the design of a novel mobile decision support system which can provide ubiquitous information access to private investors

Information Systems Outsourcing Rudy Hirschheim,Armin Heinzl,Jens Dibbern,2007-06-13 Four years have been passed away since the first edition of this book has been published While certain key issues on IS sourcing like determinants and application service provision have become more mature from an academic and industry perspective additional topics have arisen on the horizon In particular offshoring and business process outsourcing have led to numerous insightful publications which offer a valuable and indispensable holistic sourcing perspective Thus the second edition of our outsourcing book deals with enduring themes new perspectives and global challenges In addition to classical themes like Sourcing Determinants Part I Relationship Aspects Part II and Experiences Part III we felt it worthwhile to add three new parts They cover information systems outsourcing from a Vendor and Individual Perspective Part IV Application Service Providing Part V as well as Offshoring and Global Outsourcing Part VI Again we have thoughtfully tried to arrange a compilation of contemporary outsourcing research as a primer and a platform for scientific discourse In contrast to the first edition this book is not the outcome of an International Conference but rather an update of important and relevant perspectives Since the Third International Conference on Outsourcing of Information Services will take place 2007 in Heidelberg Germany it may be considered as an epilogue for further interactions and discussions
