Technology and the Rise of Great Powers Jeffrey Ding, 2024-08-20 Technological revolutions have long been understood as one of the key factors affecting the rise of great powers Yet when these dynamics have been studied the focus tends to be on the moment of innovation where was a key technology invented In this book Jeffrey Ding argues that it s not innovation but rather the way a technology diffuses through a country that

determines whether and how it strengthens the state The result is a new way to consider how technology and power have played out over history and what this might mean for the future To make this case Ding first outlines a new theory that centers on not the creation of new technology but its spread across society looking specifically at the role of education in promoting technological skill and literacy He then shows how this approach changes our understanding of three canonical cases Britain's rise during the first industrial revolution America's rise during the second industrial revolution and Japan's rise and decline during the third industrial revolution He then expands out to consider what this theory would predict for the coming competition between the United States and China in an AI driven fourth industrial revolution The result is an ambitious wide ranging take on how technology shapes world order Provided by publisher *Human Capital and Regional Development in Europe* Claude Diebolt, Ralph Hippe, 2022-01-07 Human capital is of utmost importance for the future of our knowledge economies and societies However it is unequally distributed in Europe contributing to marked spatial patterns of economic prosperity within and across countries In many cases these patterns have a long history To understand them better it requires to go back in time when mass schooling was starting to become a reality across Europe Taking a long run perspective over more than 150 years this book shows the development and the distribution of human capital in the regions of Europe and its connections with the economy It provides insights into recent research findings in this area including theoretical advances and the use of new empirical data Smart Technologies and Innovations in Design for Control of Technological Processes and Objects: Economy and Production Denis B. Development Economics Natalia Bracarense, Louis-Philippe Rochon, 2022-02-27 Since the inception of development economics in the post World War II period most of its proponents have prescribed the adoption of western institutions as the path for prosperity the unequivocal solution for poverty illiteracy hunger inequality and violence in the world Seventy years of attempts or at least the pretense thereof to reproduce the western model in completely different historical and cultural contexts have proven to be no more than a mirage for most Faced with this scenario why do economists insist on the ideas of development convergence and emulation of the lifestyle of western countries Is it possible to disassociate development from multidimensional instability dependency subordination and exploitation Is the current social political ecological and economic organized destabilization observed in the western countries a model to follow a desirable end of history These questions raised earlier by some fellow economists have become ever more pressing in the present context of generalized instability The book questions how ethical and professionally responsible it is for economists to continue to undiscerningly prescribe miraculous one size fits all market oriented models to solve socio economic problems everywhere The contributors of this edited volume invite the readers to consider these questions and further similar inquiries in the future The chapters in this book were originally published as a special issue of the journal *Review of Political Economy International*

Macroeconomics in the Wake of the Global Financial Crisis Laurent Ferrara, Ignacio Hernando, Daniela Marconi, 2018-06-13 This book collects selected articles addressing several currently debated issues in the field of international macroeconomics They focus on the role of the central banks in the debate on how to come to terms with the long term decline in productivity growth insufficient aggregate demand high economic uncertainty and growing inequalities following the global financial crisis Central banks are of considerable importance in this debate since understanding the sluggishness of the recovery process as well as its implications for the natural interest rate are key to assessing output gaps and the monetary policy stance The authors argue that a more dynamic domestic and external aggregate demand helps to raise the inflation rate easing the constraint deriving from the zero lower bound and allowing monetary policy to depart from its current ultra accommodative position Beyond macroeconomic factors the book also discusses a supportive financial environment as a precondition for the rebound of global economic activity stressing that understanding capital flows is a prerequisite for economic policy decisions
