Technology Growth And The Labor Market:

Technology, Growth, and the Labor Market Donna K. Ginther, Madeline Zavodny, 2012-12-06 Technology Growth and the Labor Market brings together research by economists from academia and the Federal Reserve System The first section of the volume includes discussions by monetary policymakers with firsthand experience in determining how technology affects productivity inequality and macroeconomic growth Papers in the second section discuss the sources of the surge in labor productivity growth during the latter half of the 1990s and present forecasts of labor productivity growth rates during the next few years In the third section the papers focus on the role of technological advances in changes in earnings inequality in the labor market The authors examine whether inequality should be viewed as a causal result of skill biased technological change or whether there is a missing link or perhaps no link between changes in technology and changes in wage inequality The final section explores the relationships between computer investment worker skills human resource practices and productivity at the industry and firm levels

Reskilling the Workforce in the Labor Market: The Country Cases Meçik, Oytun, 2024-03-05 In the dynamic model of today s workforce marked by technological upheavals changing consumer preferences and global economic shifts a pressing challenge looms large the imperative for continuous adaptation through reskilling As the demand for specialized skills intensifies with technological advancements and the nature of work undergoes profound transformations individuals employers and societies grapple with the need to stay competitive The book *Reskilling the Workforce in the Labor Market: The Country Cases* emerges as a beacon of solutions in this complex terrain addressing the critical facets of reskilling that are pivotal for thriving in the future job market The workforce is confronted with multifaceted challenges ranging from the disruptive impact of automation to the complexity of evolving job roles in a service oriented economy Individuals face the risk of being left behind if they do not acquire the necessary skills and education while employers contend with productivity gaps and high turnover due to a mismatch between job demands and employee capabilities Moreover societal issues such as skill gaps and rising unemployment call for a concerted effort to establish a culture of lifelong learning The high cost and limited availability of training programs along with time constraints and resistance to change further compound the challenges individuals and organizations face in navigating this reskilling imperative

The Jobs of Tomorrow Mark A. Dutz, Rita K. Almeida, Truman G. Packard, 2018-04-10 While adoption of new technologies is understood to enhance long term growth and average per capita incomes its impact on lower skilled workers is more complex and merits clarification Concerns abound that advanced technologies developed in high income countries would inexorably lead to job losses of lower skilled less well off workers and exacerbate inequality Conversely there are countervailing concerns that policies intended to protect jobs from technology advancement would themselves stultify progress and depress productivity This book squarely addresses both sets of concerns with new research showing that adoption of digital technologies offers a pathway to more inclusive growth by increasing adopting firms outputs with the jobs

enhancing impact of technology adoption assisted by growth enhancing policies that foster sizable output expansion The research reported here demonstrates with economic theory and data from Argentina Brazil Chile Colombia and Mexico that lower skilled workers can benefit from adoption of productivity enhancing technologies biased towards skilled workers and often do The inclusive jobs outcomes arise when the effects of increased productivity and expanding output overcome the substitution of workers for technology While the substitution effect replaces some lower skilled workers with new technology and more highly skilled labor the output effect can lead to an increase in the total number of jobs for less skilled workers Critically output can increase sufficiently to increase jobs across all tasks and skill types within adopting firms including jobs for lower skilled workers as long as lower skilled task content remains complementary to new technologies and related occupations are not completely automated and replaced by machines It is this channel for inclusive growth that underlies the power of pro competitive enabling policies and institutions such as regulations encouraging firms to compete and policies supporting the development of skills that technology augments rather than replaces to ensure that the positive impact of technology adoption on productivity and lower skilled workers is realized

The Last Technological Innovations and Its Effects on Growth Process, Labor Market and Society Gül Ekinci, Burhan Akyılmaz, 2020-12-17 Innovation generally based on curiosity and intuition is defined as a discovery invention and an R the idea of having more output with less input is based on production info and technologies production volume the rise of motivation are based on labor force and therefore they are all accepted as indicators of economic growth Capital accumulation technological developments and increase in labor force constitute the main dynamics of growth of the global world economy Technological progress doesn't only provide high output and productivity but it also creates economic growth Since growth in economic sense corresponds to the rise in tools and products that are used to meet human needs innovations create new employment and business lines at this point On the other hand innovations in social sense fight against poverty inequality and also exclusion being related to them Innovations offer technological effective productive and sustainable solutions to these problems in social sense While developed countries that are more advanced in technology and economic growth constitute only one fifth of the world population they use four of five of the world resources and therefore the gap between developing countries and them is increasing everyday This situation is seen as an obstacle in front of the aim of a sustainable world Since the direction of technological innovation is determined by social and economic needs innovation types such as radical disruptive incremental contrary operational and marketing innovations create an effect of leverage with its niche role in sustainable development Many problems which are untouched in economic social and technological senses and also which are seen desperate to solve can only be solved through paradigm shifting and disruptive radical innovations that should be applied in a way that will break the existing taboos Disruptive innovations create new business lines by bringing radical solutions for the problems that seem unsolvable and stepwise incremental staggered innovations strengthen the sub innovations in these new businesslines At this point

opening the way for innovations attaching importance to creative ideas to increase efficiency evaluating the contribution of innovation and also managing the processes well are quite important in innovation management The authors in this book consider innovations in different fields by evaluating the effects of innovations on labor market society and economy in order to manage the process well and contribute to it Proceeding of the International Science and Technology Conference "FarEastCon 2019" Denis B. Solovev,Viktor V. Savaley,Alexander T. Bekker,Valery I. Petukhov,2020-04-13 This book presents the proceedings of the International Science and Technology Conference FarEastCon 2019 which took place on October 1 4 2019 in Vladivostok Russian Federation The conference provided a platform for gathering expert opinions on projects and initiatives aimed at the implementation of far sighted scientific research and development and allowed current theoretical and practical advances to be shared with the broader research community Featuring selected papers from the conference this book will be of interest to experts in various fields whose work involves developing innovative solutions and increasing the efficiency of economic activities *Labor Market Distortions, Rural-Urban Inequality, and the Opening of the People's Republic of China Economy* Thomas Hertel,2008-05 Evaluates the impact of some key factor market reforms on rural urban inequality income distribution using a household disaggregated recursive dynamic computable general equilibrium model of the People s Republic of China It also explores how these factor market reforms interact with product market reforms currently under way as part of the country s World Trade Org WTO accession process The simulation results show that reforms in the rural land rental market hukou system as well as increasing off farm labor mobility would reduce the urban rural income ratio dramatically Furthermore the combination of WTO accession factor market reforms improves both efficiency equality significantly Charts tables graphs **The European Labor Market and Technology** Artur Usanov ,Eline Chivot ,João Silveira,Esther van Luit,Frank Bekkers,Govert Gijbers,2014-07-09 In recent years rapid technological progress has led to a wholesale destruction of middle level jobs and a substantial rise in income inequality It could also bring an era of high structural unemployment These impacts constitute a major challenge that cannot be ignored by policymakers They affect the fundamentals of our labor market and might severely shake the social structure and stability of our society This new report examines the impacts of technology on the European labor market The report documents that technological innovation brings not only immense benefits but also significant dislocations in the labor market by making many jobs redundant HCSS calls upon policymakers to take the risks of job polarization increased inequality and potentially high technological unemployment quite seriously and suggests some policy measures that could mitigate these risks The study was conducted in the context of the TNO Strategy Change program To download the report please click on the button on the right *Modeling Economic Growth in Contemporary Slovakia* Michael Augustin,Peter Jančovič,Bruno S.
