Tectonic Globaloney:

Tectonic Globaloney N. Christian Smoot, 2012-05-30 Forty five years after the synthesis of the plate tectonic hypothesis much newer and better information has been gathered by the seagoers of the world Contrary to popular opinion among earth scientists the purveyors of plate tectonics are the present day snake oil salesmen This null hypothesis is fraught with misinformation and misconceptions It is in need of a massive make over Midocean ridge spreading does not occur universally especially in Iceland and the North Pacific basin Deep earthquakes do not define a descending slab in fact do not even occur in most places along the trenches Therefore subduction does not occur Continental drift is a figment of overly active imaginations and Gondwana is an even greater figment India has been in place for several billion years rather than wandering around Index fossils like Lystrosaurus and Cynognathus are misused misdated and show nothing Land bridges have surfaced and been submerged many times over the years allowing for free passage of fauna and flora Fracture zones rather than showing the direction of seafloor spreading leave nothing more than a pattern of at least four different directions on the ocean floor as they intersect in a random fashion The Chicxulub crater is not the result of a bolide strike and this was known from the get go In 2004 the first edition of Tectonic Globaloney was published Since that time much new information has been gathered and published The Ocean Drilling Program has gone defunct as the owners of that program finally realized admitted that they were not recovering basement material self admitting that only eight off ridge cores had ever reached real basement Therefore the age of the ocean floor was unknown and the magnetic anomalies are not ground truthed The time has come for the field hands to take over and replace the ideas mostly derived by the geophysicists Plate tectonics does not work
