Telecommunications Applications: Proceedings Of The First International Workshop Ahmed Karmouch, Roger Impey, 1999-09-24 A software agent has a spectrum of definitions At one end of the scale are relatively simple client based software applications that can assist users in performing mundane tasks such as sorting e mail or downloading web pages This class of agents is often referred to as personal assistant agents At the other end of the scale is the concept of sophisticated software entities possessing artificial intelligence that autonomously travel through a network environment and make complex decisions on a user s behalf In telecommunications the definition lies somewhere between those two extremes This classification of mobile agents although not strictly adhering to the definition of intelligent agents originally proposed by the artificial intelligence community is generally acknowledged to be a useful categorization and has started to gain widespread acceptance We therefore define a mobile agent as a program that acts on behalf of a user or another program and is able to migrate from host to host on a network under its own control The agent chooses when and where it will migrate and may interrupt its own execution and continue elsewhere on the network The agent returns results and messages in an asynchronous fashion This volume discusses the emerging field of mobile software agents and their applications to the area of telecommunications such as active networks e commerce the Internet interactive QoS network management and feature interactions It addresses the needs of a wide audience including researchers software agent systems and telecommunication applications designers and users of software agents [Handbook of Research on Telecommunications Planning and Management for Business](#) Lee, In, 2009-03-31 This book provides original in depth and innovative articles on telecommunications policy management and business applications Provided by publisher *Evolution of Telecommunication Services* Emmanuel Bertin, Noel Crespi, Thomas Magedanz, 2013-10-14 In the telecom world services have usually been conceived with a specific mindset This mindset has defined the traditional characteristics of these services services distinguished by their linkage with the access network tight control over service use e g authentication billing lack of deep personalization capabilities mass services only and reliance on standardization to achieve end to end interoperability between all the actors of the value chain e g operators platform manufacturers device manufactures This book offers insights into this complex but exciting world of telecommunications characterized by constant evolution and approaches it from technology as well as business perspectives The book is appropriately structured in three parts a an overview of the state of
