Maldague, 2012-12-06 With national trade barriers falling causing the expansion of the competitive global market the question of quality control has become an essential issue for the 1990s The time where the promise was to replace a product if it does not work seems to have passed what is more important now is not so much a reduction in what is going wrong but an increase of what is going right the first time Feigenbaum 1990 This new trend is sometimes referred to as total quality Among the many advantages of this zero defect manufacturing policy we can enumerate Laurin 1990 superior marketability of wholly dependable products enormous gain in productivity elimination of waste full cost in replacing poor quality work and retrofitting rejected products from the field Although total quality is a relatively new and attractive concept for mass products such as cars consumer electronics and personal computers in many fields mainly aerospace and military it has been the rule for years because of security reasons *Advances in Structural Health Monitoring* Maguid H.M. Hassan, 2019-11-20

The concepts presented in this book are some of the new advancements in the design of structural health monitoring systems It is envisaged that such advancements will lead to smart structural health monitoring that will result in sustainable engineering systems Sustainability is considered an important objective in today's engineering design due to the current state of climate change and global warming both of which are hugely aggravated by industrial and construction activities This book presents demonstrations of and applications for new advancements such as infrared thermography ultrasonic guided waves and strain sensors among others The information presented will encourage further research and implementation of these advanced techniques and technologies in structural health monitoring **Optical Engineering**

, 1994 Publishes papers reporting on research and development in optical science and engineering and the practical applications of known optical science engineering and technology *Emerging Non-destructive Technologies for Food Quality Analysis* C. K. Sunil, Ashish Rawson, D. V. Chidanand, S. Shanmugasundaram, 2025-09-26 Non destructive quality analysis refers to a method of food testing that is designed explicitly to eliminate the potential of damage to the food quality There are various techniques by which this approach may be applied all of which are being used recently for quality analysis which provides important information on food characteristics such as texture structure and mechanical physical and chemical properties Conventional methods of quality analysis are time consuming expensive and invasive in nature particularly for long duration analysis Non destructive methods have thus become highly appealing for their potential to reduce cost and waste and to shorten processing times These approaches not only preserve the integrity of the product but also expedite the analysis process The most common non destructive methods used include machine vision Spectroscopy E

nose tongue Ultrasonics and hyperspectral imaging among others While these methods have been in practice for some time the technological advancements of the last decade have improved the precision and reliability of these tools making them more popular An overview of the dominant non destructive methods including the more novel technologies such as biosensors and terahertz application have not until now been comprehensively covered in the form of a research volume Emerging Non destructive Technologies for Food Quality Analysis brings together detailed information on all these most current advances in technology and elucidates their application in food processing Covering theory principle recent advances and practical applications in food analysis this book will be an invaluable reference for students researchers food trainers and industry personnel

Mobile Robot Navigation with Intelligent Infrared Image Interpretation William L. Fehlman, Mark K. Hinders, 2009-06-13 Mobile robots require the ability to make decisions such as go through the hedges or go around the brick wall Mobile Robot Navigation with Intelligent Infrared Image Interpretation describes in detail an alternative to GPS navigation a physics based adaptive Bayesian pattern classification model that uses a passive thermal infrared imaging system to automatically characterize non heat generating objects in unstructured outdoor environments for mobile robots The resulting classification model complements an autonomous robot's situational awareness by providing the ability to classify smaller structures commonly found in the immediate operational environment

Evaluation of carcass and meat quality in ruminants C. Lazzaroni, S. Gigli, D. Gabina, 2023-08-28 Livestock production systems will only be sustained in the long term if their products continue to meet the demand of consumers The quality of ruminant carcasses meat and meat products is of predominant importance in a competitive market where consumers tend to have a preconceived idea about the criteria that define meat quality such as flavour tenderness juiciness smell colour and texture The carcass evaluation could be interesting as a precocious classification of the final quality of meat coming from each carcass Today the quality characteristics of the meat must be different according to its utilisation supermarket butcher catering refectory etc and so it is very important to choose very early the final destination of the carcass Obviously the carcass classification must correlate with meat quality characteristics required by final consumer Other important factors that have to be taken into account in order to maintain a demand for ruminant meat are safety and traceability This book reviews the historical and recent developments for carcass evaluation and grading for meat quality assessment in beef and sheep It places special emphasis on new concepts and approaches to define carcass and meat quality

and on the use of modern technologies for composition and quality evaluation A range of technologies are presented such as ultrasounds and colour reflectance X ray computerised tomography spectral and thermal imaging image analysis and NIRS The use of phenotypic markers such as the plasma hormones and genetic markers to predict carcass composition and meat quality are also presented
