Computer Modern Typefaces Donald Ervin Knuth, 1986 The Complete Design of a Large Family of Fonts Now 35 years after the first edition the leading worldwide experts on these systems have spent several months inspecting every page thoroughly We now believe that every i has been properly dotted every t has been properly crossed and every bug has been properly exterminated This volume contains precise definitions of about 500 letters numerals and other symbols all described with METAFONT Donald E Knuth s revolutionary language for the design of typefaces Readers will learn how to make their own personal variations of the fonts simply by changing a few parameters Special symbols that are needed for unusual applications can also be created by using the many examples in this book as a model More ambitious readers will be able to

extend this work to other character sets such as phonetic or Cyrillic alphabets A close study of the details captured in these METAFONT programs will reveal many previously unpublished tricks that type designers have learned during the past centuries Computer Modern is a family of typefaces that includes 75 standard fonts ranging from the sans serif faces used to typeset the copy on this book jacket to the more formal alphabets and mathematical symbols used to typeset the text of the book itself The 75 standard fonts can easily be extended to an essentially infinite number of further variations because Computer Modern is a meta design rather than a single design In particular this means that different point sizes of type can be drawn to different specifications thereby obtaining better readability Compatible typefaces can be generated for all sorts of printing equipment ranging from low resolution CRT displays to medium resolution laser printers to high resolution phototypesetters Charles Bigelow's introduction explains the history of the modern style of the type design which originated 200 years ago and is being brought up to date by the developments in this book The type designs are accompanied by almost 750 illustrations which are interesting in their own right as examples of mechanically constructed letterforms Specimens of the 75 standard fonts appear near the close of this book followed by several comprehensive indexes Computer Modern Typefaces is the fifth in a five volume series on Computers and Typesetting all authored by Knuth This series presents the results of nearly a decade of innovative research on the problems of preparing publications of high typographic quality
