Biological and Medical Research Division Semiannual Report Argonne National Laboratory. Division of Biological and Medical Research,1958 **Fibrous Proteins: Structures and Mechanisms** David A.D. Parry,John M. Squire,2017-01-18 This book provides the readers with an up to date review of the design structure and function of a representative selection of fibrous proteins in both health and disease The importance of the helical coiled coil a conformational motif based on the heptad repeat in the amino acid sequence of all fibrous proteins and parts of some globular proteins is underlined by three Chapters devoted to its design structure function and topology Specific proteins covered in the text and which depend on the coiled coil for their structure and function include the intermediate filament proteins tropomyosin myosin paramyosin fibrin and members of the spectrin superfamily Also described are fibrous proteins based on the pleated sheet and collagen conformations Recombinant structural proteins especially of silk and collagen are discussed in the context of developing new biomaterials with varied applications Established researchers and postgraduate students in the fields of protein chemistry biochemistry and structural biophysics will find Fibrous Proteins Structures and Mechanisms to be an invaluable collection of topical reviews that describe the basic advances made in the field of fibrous proteins over the past decade This book written

by recognized authorities in the field provides a clear account of the current status of fibrous protein research and in addition establishes the basis for deciding the most appropriate directions for future activity including the applications of protein engineering and the commercial exploitation of new biomaterials *The Structural Basis of Muscular Contraction* John Squire, 2012-12-06 Muscular contraction provides one of the most fascinating topics for a biophysicist to study Although muscle comprises a molecular machine whereby chemical energy is converted to mechanical work its action in producing force is something that is readily observable in everyday life a feature that does not apply to most other structures of biophysical interest In addition muscle is so beautifully organized at the microscopic level that those important structural probes electron microscopy with the associated image analysis methods and X ray diffraction have provided a wealth of information about the arrangements of the constituent proteins in a variety of muscle types But despite all this the answer to the question How does muscle work is still uncertain especially with regard to the molecular events by which force is actually generated and the question remains one of the major unsolved problems in biology With this problem in mind this book has been written to collect together the available evidence on the structures of the muscle filaments and on their arrangements in different muscle cells to extract the common structural features of these cells and thus to attempt to define a possible series of mechanical steps that will describe at molecular resolution the process by which force is generated The book cannot be considered to be an introductory text in fact it presents a very detailed account of muscle structure as gleaned mainly from electron microscopy and X ray diffraction **Public Health Reports** ,1954 Proceedings of the 4th International Conference on Performance Based Design in Earthquake Geotechnical Engineering (Beijing 2022) Lanmin Wang, Jian-Min Zhang, Rui Wang, 2022-09-19 The 4th International Conference on Performance based Design in Earthquake Geotechnical Engineering PBD IV is held in Beijing China The PBD IV Conference is organized under the auspices of the International Society of Soil Mechanics and Geotechnical Engineering Technical Committee TC203 on Earthquake Geotechnical Engineering and Associated Problems ISSMGE TC203 The PBD I PBD II and PBD III events in Japan 2009 Italy 2012 and Canada 2017 respectively were highly successful events for the international earthquake geotechnical engineering community The PBD events have been excellent companions to the International Conference on Earthquake Geotechnical Engineering ICEGE series that TC203 has held in Japan 1995 Portugal 1999 USA 2004 Greece 2007 Chile 2011 New Zealand 2015 and Italy 2019 The goal of PBD IV is to provide an open forum for delegates to interact with their international colleagues and advance performance based design research and practices for earthquake geotechnical engineering **Report of Investigations** ,1948 **Report of Investigations. Bemmelen, 2013-10-22 Developments in Geotectonics Volume 2 Geodynamic Models An Evaluation and a Synthesis presents the concept of sea floor spreading and the hypothesis of global plate tectonics This book provides a basic understanding of the global movements Organized into eight chapters this volume begins with an overview of the concept of global plate tectonics with its additional hypotheses of subduction zones and sea floor spreading This text then examines the concept of vertical deformations of the lithosphere and their gravitational spreading Other chapters consider the analysis of geotectonic processes that is based on some general principles of their mechanics This book discusses as well the origin of mega undations in turbulent and laminar flow systems in the lower mantle where the matter may have a Newtonian viscosity The final chapter deals with the geodynamics of the Earth s crust as the result of the outward growth of the deep ocean floor from mid ocean ridges This book is a valuable resource for geologists geonomists and geophysicists
