The California Sea Otter Saved Or Doomed:

The California Sea Otter John Woolfenden, 1985 *The Community Ecology of Sea Otters* Glenn R. VanBlaricom, James A. Estes, 2012-12-06 The impetus for this volume comes from two sources The first is scientific by virtue of a preference for certain large benthic invertebrates as food sea otters have interesting and significant effects on the structure and dynamics of nearshore communities in the North Pacific The second is political because of the precarious status of the sea otter population in coastal California the U S Fish and Wildlife Service USFWS announced in June 1984 a proposal to establish a new population of sea otters at San Nicolas Island off southern California The proposal is based on the premise that risks of catastrophic losses of sea otters due to large oil spills are greatly reduced by distributing the population among two geographically separate locations The federal laws of the U S require that USFWS publish an Environmental Impact Statement EIS regarding the proposed translocation of sea otters to San Nicolas Island The EIS is intended to be an assessment of likely biological social and economic effects of the proposal In final form the EIS has an important role in the decision of federal management authority in this case the Secretary of the Interior of the U S to accept or reject the proposal

The War Against the Seals Briton Cooper Busch, 1987 Concentrates on the fur seals of the Bering Sea and the harp seals of the Newfoundland hunt Reveals the consequences of an industry's killing of more than 50 000 000 seals in a century and a half **Report to Congress, Coastal Barrier Resources System** Joel Walker Hedgpeth, 1988 **Cognitive Kin, Moral Strangers? Linking Animal Cognition, Animal Ethics & Animal Welfare** Judith Benz-Schwarzburg, 2019-10-14 In *Cognitive Kin Moral Strangers* Judith Benz Schwarzburg reveals the scope and relevance of cognitive kinship between humans and non human animals She presents a wide range of empirical studies on culture language and theory of mind in animals and then leads us to ask why such complex socio cognitive abilities in animals matter Her focus is on ethical theory as well as on the practical ways in which we use animals Are great apes maybe better described as non human persons Should we really use dolphins as entertainers or therapists Benz Schwarzburg demonstrates how much we know already about animals capabilities and needs and how this knowledge should inform the ways in which we treat animals in captivity and in the wild **Report to Congress** United States. National Park Service. Coastal Barriers Study Group, 1988

Marine Mammals, 1981 *Conservation Fallout* John Wills, 2012-08-15 An unprecedented look at nuclear politics in California Vehement widespread opposition accompanied the rise of the U S nuclear industry during the 1960s and 1970s In *Conservation Fallout* John Wills examines one of the most controversial atomic projects of the period Pacific Gas and Electric Company's decision to build its premier nuclear power plant at Diablo Canyon a relatively unsettled biologically rich and especially scenic part of the central California coastline Two competing visions of California emerged while the plant underwent construction Environmentalists used Diablo as a symbol of impending ecological doomsday while PG E envisioned it as the model that would usher in a new age of energy production The Sierra Club almost disbanded over whether to

condone or protest the reactor project Divisions also emerged in the local community as residents and politicians enticed by the promise of cheap electricity and lucrative tax revenues found themselves pitted against others who feared the dangers of radiation in their own backyards The controversy intensified when a fault line was discovered within three miles of the plant Grassroots groups The Mothers for Peace a local women s group and The Abalone Alliance a statewide nonviolent direct action organization did their utmost to stop the plant from going on line In 1979 an Alliance rally in San Francisco attracted 25 000 people while 40 000 others gathered in San Luis Obispo During a two week long blockade of the Diablo plant in 1981 over 1 900 activists were jailed the largest arrest in the history of American antinuclear protest Despite its significance in the history of twentieth century environmental issues and the continuing debate over the safety of nuclear power the full story of Diablo Canyon has not been told until now Wills bases his account on extensive interviews with the individuals involved as well as on the archives of the Sierra Club several protest organizations public agencies PG E and others The result is an engaging balanced examination of nuclear politics in California By focusing on one of the last wild places in the state and its transformation into a major technological center and on the evolution and strategies of the little studied grassroots protest groups determined to protect California and resist the spread of nuclear technology Wills has made a major contribution to our understanding of America s nuclear age

Animal Minds Donald R. Griffin, 2024-05-31 In *Animal Minds* Donald R Griffin takes us on a guided tour of the recent explosion of scientific research on animal mentality Are animals consciously aware of anything or are they merely living machines incapable of conscious thoughts or emotional feelings How can we tell Such questions have long fascinated Griffin who has been a pioneer at the forefront of research in animal cognition for decades and is recognized as one of the leading behavioral ecologists of the twentieth century With this new edition of his classic book which he has completely revised and updated Griffin moves beyond considerations of animal cognition to argue that scientists can and should investigate questions of animal consciousness Using examples from studies of species ranging from chimpanzees and dolphins to birds and honeybees he demonstrates how communication among animals can serve as a window into what animals think and feel just as human speech and nonverbal communication tell us most of what we know about the thoughts and feelings of other people Even when they don t communicate about it animals respond with sometimes surprising versatility to new situations for which neither their genes nor their previous experiences have prepared them and Griffin discusses what these behaviors can tell us about animal minds He also reviews the latest research in cognitive neuroscience which has revealed startling similarities in the neural mechanisms underlying brain functioning in both humans and other animals Finally in four chapters greatly expanded for this edition Griffin considers the latest scientific research on animal consciousness pro and con and explores its profound philosophical and ethical implications
