the principles of remote sensing and to the applications remote sensing has to the land planning process The potential applications to land planning are many and varied For example remote sensing techniques and aerial photography in particular can provide planners with an overview of their communities they can obtain in no other way These same techniques can also provide planners with a whole variety of land resource data and have the capability of updating these data on a systematic basis Maps too can be produced from a combination of remote sensing and cartographic techniques engineering maps topographic maps property maps and a host of other thematic maps These maps and the photos from which they are made can be used by planners to explain proposed land use or zoning changes at public meetings They may also be introduced as evidence in courts of law if later the results of these changes are contested by individual or groups of landowners Since land planning tends to be conducted at local levels the discussion in this book focuses on the uses of aerial photography the most effective tool for small area analysis The discussion is also directed at those who are not regular users of remote sensing techniques

The Use of Small-Format Aerial Photography in Aquatic Macrophyton Sampling BW. Breedlove, WM. Dennis, 1984 Standard 35 and 70 mm low altitude aerial photography provides a low cost effective means for sampling aquatic macrophyte communities Both color and color infrared CIR film have been used successfully A haze filter should be used with color film and a Wratten 12 or 15 filter should be used with color infrared Adequate water penetration is provided by color film in waters with high turbidity and suspended matter while CIR film may be preferable in low turbidity waters Ground coverage tables provide scale and areal coverage in tabular form at various altitudes focal lengths and appropriate time intervals to ensure 60% stereo overlap Various cameras and lens combinations can be used however a 28 mm lens with the 35 mm single lens reflex SLR camera and a 40 or 80 mm lens with a 70 mm camera have proven very effective and allow maximum areal coverage at lower altitudes This flexibility allows photo missions to be flown below cloud bases in less than optimum conditions while still obtaining good quality photography
