Expressing the Self Minyao Huang,Katarzyna Jaszczolt,2018 This book addresses different linguistic and philosophical aspects of referring to the self in a wide range of languages from different language families including Amharic English French Japanese Korean Mandarin Newari Sino Tibetan Polish Tariana Arawak and Thai In the domain of speaking about oneself languages use a myriad of expressions that cut across grammatical and semantic categories as well as a wide variety of constructions Languages of Southeast and East Asia famously employ a great number of terms for first person reference to signal honorification The number and mixed properties of these terms make them

debatable candidates for pronounhood with many grammar driven classifications opting to classify them with nouns Some languages make use of egophors or logophors and many exhibit an interaction between expressing the self and expressing evidentiality qua the epistemic status of information held from the ego perspective The volume s focus on expressing the self however is not directly motivated by an interest in the grammar or lexicon but instead stems from philosophical discussions on the special status of thoughts about oneself known as de se thoughts It is this interdisciplinary understanding of expressing the self that underlies this volume comprising philosophy of mind at one end of the spectrum and cross cultural pragmatics of self expression at the other This unprecedented juxtaposition results in a novel method of approaching de se and de se expressions in which research methods from linguistics and philosophy inform each other The importance of this interdisciplinary perspective on expressing the self cannot be overemphasized Crucially the volume also demonstrates that linguistic research on first person reference makes a valuable contribution to research on the self tout court by exploring the ways in which the self is expressed and thereby adding to the insights gained through philosophy psychology and cognitive science

Social Neuroscience Gary G. Berntson, John T. Cacioppo, 2013-09-05 Neuroscientists and cognitive scientists have collaborated for more than a decade with the common goal of understanding how the mind works These collaborations have helped unravel puzzles of the mind including aspects of perception imagery attention and memory Many aspects of the mind however require a more comprehensive approach to reveal the mystery of mind brain connections Attraction altruism speech recognition affiliation attachment attitudes identification kin recognition cooperation competition empathy sexuality communication dominance persuasion obedience morality contagion nurturance violence and person memory are just a few Through classic and contemporary articles and reviews Social Neuroscience illustrates the complementary nature of social cognitive and biological levels of analysis and how research integrating these levels can foster more comprehensive theories of the mechanisms underlying complex behaviour and the mind
