Introduction to the Series

The subject of cybernetics is quickly growing and there now exists a vast amount of information on all aspects of this broad-based set of disciplines. The phrase "set of disciplines" is intended to imply that cybernetics and all the approaches to artificial (or machine) intelligence have a near identical viewpoint. Furthermore, systems analysis, systems theory and operational research often have a great deal in common with (and are in fact not always discernably different from) what is meant by cybernetics, as far as this series is concerned: inevitably, computer science is bound to be involved also.

The fields of application are virtually unlimited and applications are discovered in the investigation or modelling of any complex system. The most obvious applications have been in the construction of artificially intelligent systems, the brain and nervous system, and socio-economic systems. This can be achieved through other simulation (copying as
