Analyzing Language in Restricted Domains Ralph Grishman, Richard Kittredge, 2014-04-08 First published in 1986 For most of the authors represented in this collection the term Sublanguage suggests a subsystem of language that behaves essentially like the whole language while being limited in reference to a specific subject domain Argued throughout this title even if sublanguage grammars can be related to the grammar of the full standard language sublanguages behave in many ways like autonomous systems This volume will illustrate that as such they take on theoretical interest as microcosms of the whole language The papers collected in this volume were presented at the Workshop on Sublanguage held at New York University on January 19 20 1984

The Oxford Handbook of Computational Linguistics Ruslan Mitkov, 2022 Provides a comprehensive account of current research in computational linguistics Fully revised and updated throughout including 37 new chapters Features an extended glossary to explain key terms and concepts Book jacket

Recent Advances in Parsing Technology H. Bunt, Masaru Tomita, 1996-08-31 In Marcus 1980 deterministic parsers were introduced These are parsers which satisfy the conditions of Marcus's determinism hypothesis i.e. they are strongly deterministic in the sense that they do not simulate non determinism in any way In later work Marcus et al 1983 these parsers were modified to construct descriptions of trees rather than the trees themselves The resulting D theory parsers by working with these descriptions are capable of capturing a certain amount of ambiguity in the structures they build In this context it is not clear what it means for a parser to meet the conditions of the determinism hypothesis The object of this work is to clarify this and other issues pertaining to D theory parsers and to provide a framework within which these issues can be examined formally Thus we have a very narrow scope We make no arguments about the linguistic issues D theory parsers are meant to address their relation to other parsing formalisms or the notion of determinism in general Rather we focus on issues internal to D theory parsers themselves

Learning, Keeping, and Using Language M. A. K. Halliday, John Gibbons, Howard Nicholas, 1990-01-01 This volume contains selected papers from the Eight World Congress of Applied Linguistics held in Sydney in 1987 Whereas the focus of Volume I is on learning language and the standpoint of the individual learner the contributions to Volume II are concerned not so much with individuals as with communities and the reasons for and the nature of language maintenance and shift

Text Variability Measures in Corpus Design for Setswana Lexicography Thapelo J. Otlogetswe, 2011-01-18 This book is about the design of a Setswana corpus for lexicography While various corpora have been compiled and a variety of corpora based research has been attempted in African languages no effort has been made towards corpus design Additionally although extensive analysis of the Setswana language has been done by missionaries grammarians and linguists since the 1800s none of this research is in corpus design Most research has been largely on the grammatical study of the language The recent corpora research in African languages in general has been on the use of corpora for the compilation of dictionaries and little of it is in corpus design Pioneers of this kind of corpora research in African languages are Prinsloo and De Schryver 1999 De Schryver and Prinsloo 2000 and 2001 and Gouws and Prinsloo 2005 Because of a lack of research in corpora design particularly in African languages this book attempts to fill that gap especially for Setswana It is hoped that the finding of this study will inspire similar designs in other languages comparable to Setswana We explore corpus design by focusing on measuring a variety of text types for lexical richness at comparable token points The study explores the question of whether a corpus compiled for lexicography must comprise a variety of texts drawn from different text types or whether the quality of retrieved information for lexicographic purposes from a corpus comprising diverse text varieties could be equally extracted from a corpus with a single text type This study therefore determines whether linguistic variability is crucial in corpus design for lexicography

Construing Experience Through Meaning M.A.K. Halliday, Christian Matthiessen, 2006-05-16 The subject of this book is how human beings construe their experience of the world The construction of experience is usually thought of as knowledge represented in the form of conceptual taxonomies schemata scripts and the like The authors offer an interpretation that is complementary to this treating experience not as knowing but as meaning and hence as something that is construed in language In other words the concern is with the construal of human experience as a semantic system and since language plays the central role not only in storing and exchanging experience but also in construing it language is taken as the interpretative base The focus of the book is both theoretical and descriptive The authors consider it important that theory and description should develop in parallel with constant interchange between the two The major descriptive component is an account of the most general features of the ideational semantics of English which is then exemplified in two familiar text types recipes and weather

forecasts There is also a brief reference to the semantics of Chinese Theoretical issues are raised throughout as they become relevant to the discussion with the theoretical base being drawn from systemic functional linguistics Both the theoretical and descriptive proposals offered in the book are compared and contrasted with approaches deriving from AI cognitive science and cognitive linguistics

New Methods In Language Processing D. B. Jones,H. Somers,2013-11-05 Studies in Computational Linguistics presents authoritative texts from an international team of leading computational linguists The books range from the senior undergraduate textbook to the research level monograph and provide a showcase for a broad range of recent developments in the field The series should be interesting reading for researchers and students alike involved at this interface of linguistics and computing

Legal Translation Outsourced Juliette R. Scott,2019 As a result of globalization cross border transactions and litigation and multilingual legislation outsourcing legal translation has become common practice Unfortunately over reliance on such outsourcing has given rise to significant dangers including information asymmetry goal divergence and risk Legal Translation Outsourced provides the only current reference on commercial legal translation performed outside institutions Juliette Scott casts a critical eye on the practice as it now stands offering an analysis of key risks and constraints Her work is informed by empirical data of the legal translation outsourcing markets of 41 countries Scott proposes original theoretical models aimed both at training legal translators and informing all stakeholders including principals and agents These include models of legal translation performance a classification of constraints on legal translation applying upstream during and downstream of translation work and a description of the complex chain of supply Working to improve the enterprise itself Scott shows how implementing a comprehensive legal translation brief a sorely needed template can significantly benefit clients by increasing the fitness of translated texts Further she opens a number of avenues for future research with an eye to translator empowerment and professionalization

Zellig Harris Robert F Barsky,2011-04-04 The intersecting worlds of Zellig Harris Noam Chomsky s intellectual and political mentor In 1995 Robert Barsky met with Noam Chomsky to discuss hiswork in progress Noam Chomsky A Life of Dissent MIT Press 1997 Chomsky told Barsky that he shouldfocus his attention instead on midcentury linguist and activist Zellig Harris who was Chomsky modestly insisted more interesting than Chomsky himself Intrigued Barsky began to research Harris 1909 1992 and discovered thestory of a major figure in American intellectual life sitting in a corner in the middle of the room part of crucial twentieth century conversations about language technology labor politics and Zionism The intersecting worlds of Harris s intellectualand political activities were populated by such figures as Louis Brandeis Albert Einstein Franz Boas Nathan Glazer and Chomsky Barsky describes Harris s work in language studies and his pioneering ideas about discourse analysis structural linguistics and information representation He also discusses Harris s part in the pre 1948 Zionist movement when many Jews on the Left envisioned a socialist Palestine that would be a haven not only for persecuted Jews but also for disenfranchised Arabs and anyone seeking a sanctuary against oppression and recounts Harris s debates on the

subject with Brandeis Einstein and a large group of students involved with a Zionist organization called Avukah And Barsky describes Harris s views on capitalism worker owner relations and worker self management the legacy of which can be found in some of his students writings notably those of Seymour Melman Barsky shows how Harris as mentor teacher and colleague powerfully influenced figures who came to dominate the twentieth century s political discussion thinkers as different as Noam Chomsky and Nathan Glazer
