## **Subnuclear Components Preparation And Fractionation:**

Subnuclear Components G. D. Birnie, 2016-01-21 *Subnuclear Components Preparation and Fractionation* focuses on the isolation of subnuclear components of eukaryotic cells. The book first discusses the isolation of nuclear envelopes from whole tissues. Topics include nuclear envelope in situ, general consideration and evaluation of isolation methods and nuclear envelope isolation methods. The text describes the isolation of nucleoli including the isolation of nucleoli from oocytes, nuclei and physarum, and isolation of plant nucleoli. The book focuses on the preparation, characterization and fractionation of chromatin. Emphasis is on the preparation of chromatin from interphase and metaphase cells, contaminants of chromatin, characteristics of isolated chromatin and dissociation and reassociation of chromatin. The text also discusses fractionation and isolation of histones including the preparation of individual histone fractions and isolation and purification of the five main histone fractions of calf thymus during one preparation. The book also looks at the preparation and properties of chromatin non-histone proteins including isolation of nuclear RNA and isolation of DNA from eukaryotic cells. The selection is a good source of data for readers interested in the isolation of subnuclear constituents of eukaryotic cells. **Subcellular**

**Fractionation** J. M. Graham, D. Rickwood, 1997-01-30 Many investigations into the structure and function of cells and tissues require the isolation of a particular membrane or subcellular component, organelle. This book covers all the necessary aspects from breaking up the cells, homogenization via a variety of separation techniques, the isolation and fractionation, chapters to characterization of the separated organelles. *Chromosomal Nonhistone Protein* L. S. Hnilica, 2018-12-20 The second volume of the *Chromosomal Nonhistone Proteins* treatise is dedicated in its entirety to the immunobiology of these proteins. Since immunological methods are adding rapidly to our knowledge of the specificity and intranuclear localization of chromosomal nonhistone proteins, a collection of chapters dealing with various aspects of this important area was judged appropriate. *Chromatin and Chromosomal Protein Research II*, 1978-07-26 *Chromatin and Chromosomal Protein Research II*

*Centrifugal Separations in Molecular and Cell Biology* G.D. Birnie, D. Rickwood, 2014-06-28 *Centrifugal Separations in Molecular and Cell Biology* focuses on the application of modern centrifugation technology in molecular and cell biology, including the separation and fractionation of biological particles by centrifugation on the preparative and analytical scales. The selection first covers the principles and practices of centrifugation and the bases of centrifugal separations. Discussions focus on the basic concepts of sedimentation theory, centrifugation methods, designing centrifugation experiments, care of centrifuges and rotors, and statistical estimation of molecular parameters. The book also ponders on the practical aspects of rate zonal centrifugation, including gradient materials, density and viscosity of glycerol solutions, and resolution and gradient shape. The publication examines fractionations in zonal rotors and the quantitative aspects of rate zonal centrifugation. The text then reviews isopycnic centrifugation in ionic media and analytical centrifugation. Topics include separation by isopycnic banding, large scale preparative procedures, and density gradient solutes. The selection is a valuable reference for readers.
